ALLGEMEINE ÜBERSICHT 8 Uhr morgens Sonntag, den 19. März 1922

Die Luftdruckgegensätze über dem mittleren Europa sind auch heute ausserordentlich gering. Über Skandinavien hat der Tiefdruckausläufer an Höhe des Luftdruckes weiter abgenommen; durch ihn ist auch der Keil hohen Luftdruckes von der Nordsee westwärts nach dem Ozean zurückgedrängt worden. Es erscheint nicht ausgeschlossen, dass der nördliche Tiefausläufer auch unser Wetter in der Ostsee vorübergehend ungünstig beeinflussen dürfte.

WETTERAUSSICHTEN AN DER DEUTSCHEN KÜSTE für Montag, den 20. März 1922

- NORDSEE: Schwache bis frische, in Böen starke bis steife nordwestliche Winde, ziemlich kalt; meist bewölkt, stellenweise Regenschauer.
- westl. OSTSEE: wie Nordsee.
- östl. OSTSEE: Schwache bis mäßige, später auffrischende Winde aus westlichen Richtungen, ziemlich kalt; meist bewölkt, Niederschläge.
- Sturmwarnungen:
