# ALLGEMEINE ÜBERSICHT 8 Uhr morgens: Sonnabend, den 28. April 1923

Die Depression ist von Mittelschweden weiter ostwärts nach Finnland vorgeschritten, als südlicher Ausläufer erscheint heute eine Teildepression über den Westkarpathen, die in Böhmen, Schlesien, Polen und südwärts bis zur Donau Niederschlag hervorruft. Der den Tiefdruckgebilden folgende Hochdruckkeil hat sich kräftiger entwickelt als ursprünglich gedacht wurde, und ist in Verbindung getreten mit einem vom Azorenhoch über den Kanal bis Deutschland vorgetriebenen Hochkeil. Diese Keilwirkung dürfte sich auch morgen noch für unser Wetter bestimmend erweisen.
