Dienstag, 21. August 1923

DEUTSCHE

ALLGEMEINE ÜBERSICHT 8 Uhr morgens: Dienstag, 21. August 1923

Die Ostseedepression zieht über Polen und Westrußland langsam ab. Unterdessen hat sich die gestern über dem Ozean angezeigte Depression infolge der Temperaturgegensätze auf ihrer Nord-u. Südseite stark vertieft und nordostwärts nach dem Westen Schottlands vorgeschoben. Ein Ausläufer tiefen Druckes trennt das kontinentale Hochdruckgebiet von der Anticyclone über den Azoren. Im Nordseegebiet sind die Winde nach Süd und Südost zurückgedreht, vereinzelt ist bereits Regen aufgetreten, im Ostseegebiet sind die Winde abgeflaut und die Bewölkung hat zunächst abgenommen.

WETTERAUSSICHTEN AN DER DEUTSCHEN KÜSTE für Mittwoch, 22. August 1923

NORDSEE: Stark auffrischende, vielfach böige recht-drehende Winde, meist kühl, ziemlich kühl, Regenfälle.
westl. OSTSEE: Auffrischende nach West drehende Winde, meist kühl, geringe Wärmeänderung, Eintritt von Niederschlägen.
östl. OSTSEE: Zunächst schwachwindig, vielfach heiter, später langsam auffrischende westliche Winde, zunehmende Bewölkung, meist trocken.

Sturmwarnungen:

Hamburg, Deutsche Seewarte.

Capelle.

ABT. III. i. d. J. Gruber
