

ALLGEMEINE ÜBERSICHT 8 Uhr morgens: Montag, 10. Juli 1922

Kräftiger Bewegungsimpuls erangelnd hat sich das Tiefdruckgebiet unter Auffüllung langsam nordostwärts vorgeschoben; vor dem entgegenstehenden norwegischen Gebirge ist es in 2 Teile zerspalten worden, von denen der eine offenbar der norwegischen Küste entlang nordnordostwärts zieht, während der andere Zweig über dem Eingang zu den dänischen Gewässern erkennbar ist. Auf der Rückseite folgt zunächst ein flacher Keil, der bis Inland nordwärts vorgeht, westwärts auf dem Ozean folgt dann eine neue Depression, die jedoch nicht sehr tief zu sein scheint. Der Vorbeizug der Depression hat ganz Deutschland Niederschläge gebracht, in der Nordsee herrscht heute früh noch stürmisches Wetter.
