

des Deutschen Reichswetterdienstes  
Herausgegeben von der Deutschen Seewarte

Jahrgang: 69 Nr. 300

Seite 1

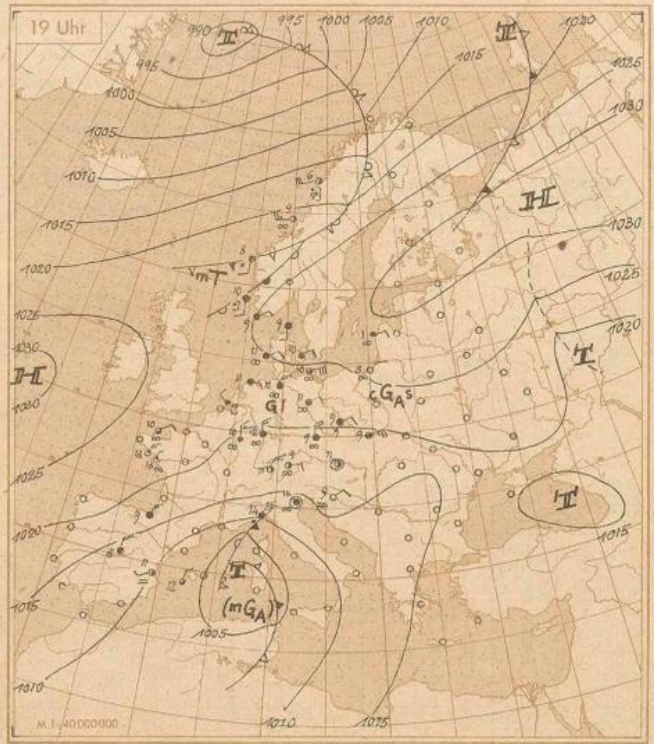

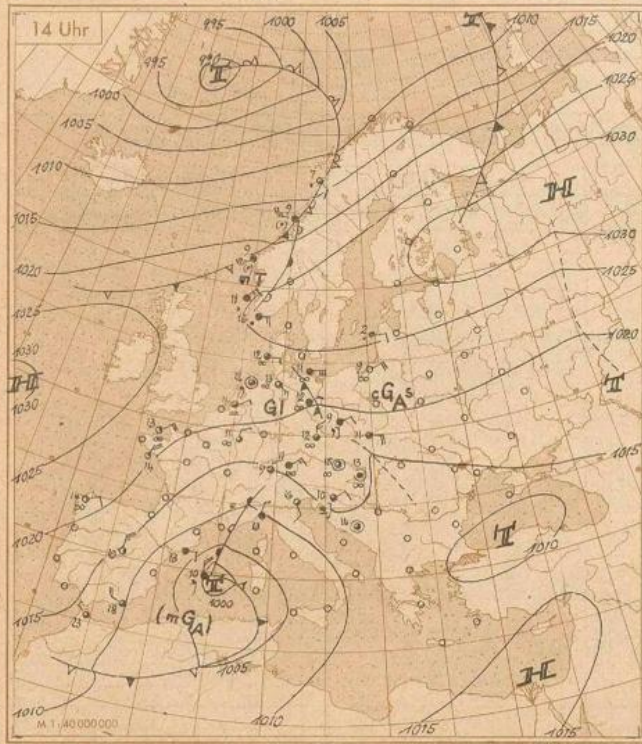

Verlagsort Hamburg

Donnerstag, den 26. Oktober 1944

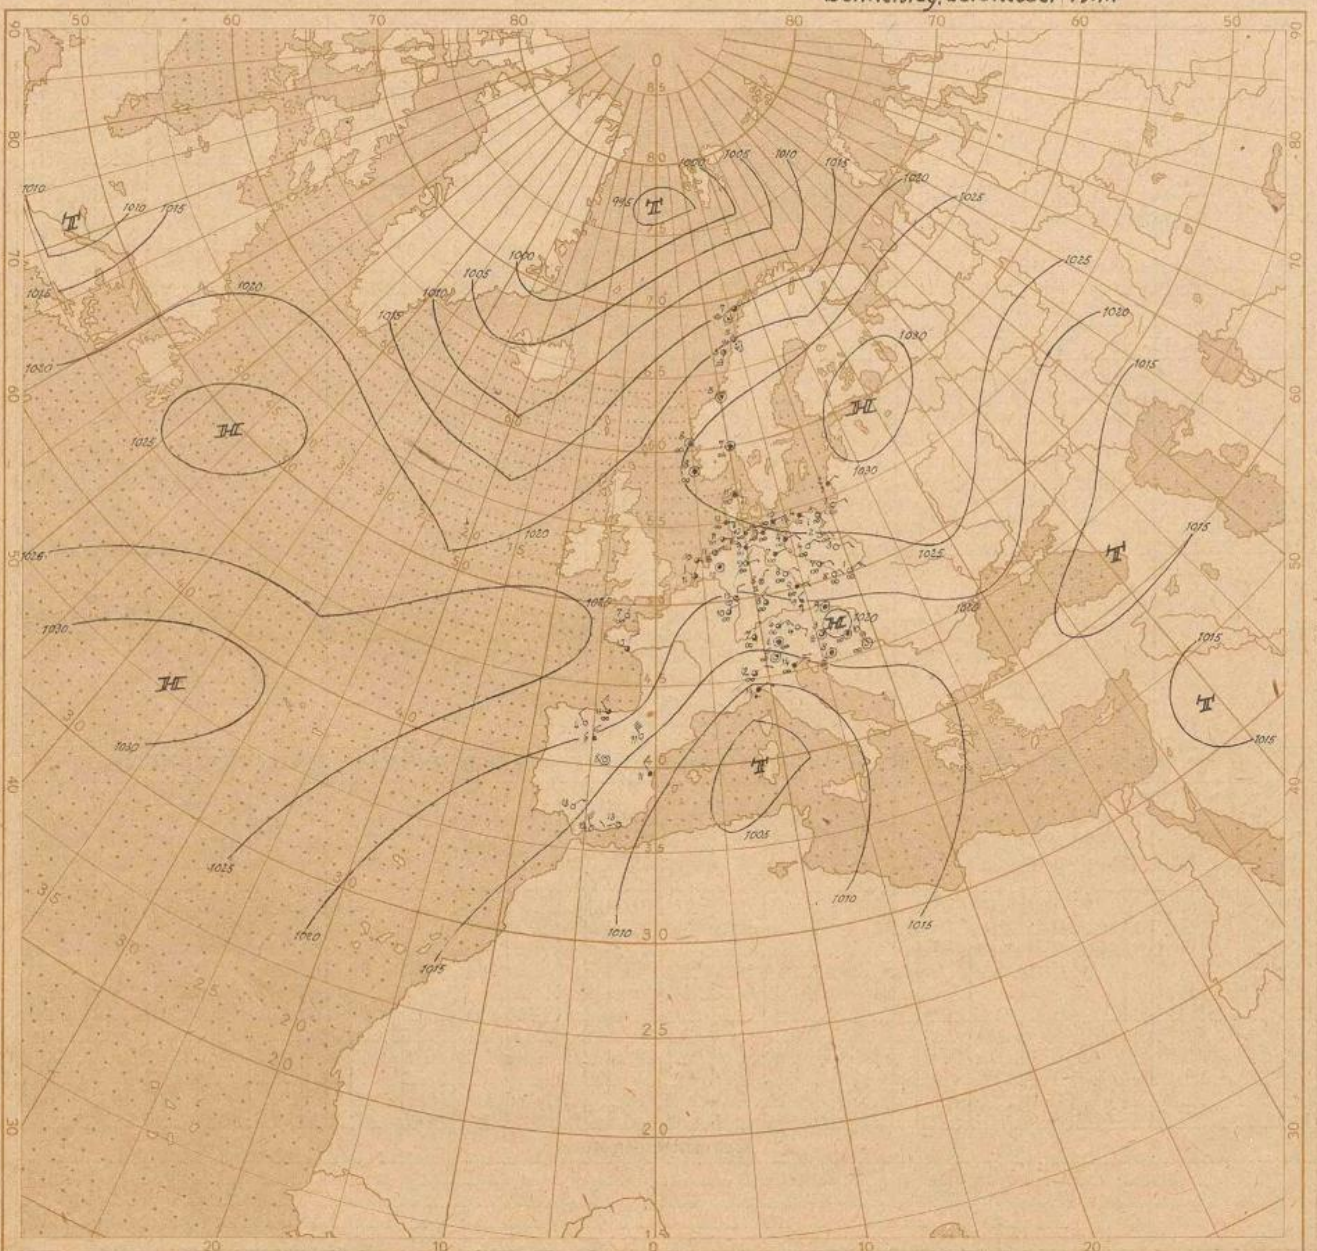

**Erläuterung:** Die Beobachtungen sind sämtlich in der Form der 1935 in Warschau beschlossenen Einheitsschlüssel wiedergegeben. Kurze Erläuterungen zu den einzelnen Ziffern werden zu Beginn jedes Vierteljahres beigegeben. Ausführlich finden sie sich in „Anweisung zur Verzifferung von Wettermeldungen“, herausgegeben vom Reichsluftfahrtministerium, Alle Zeitangaben in DGZ.

# Wetterübersicht

Donnerstag den 26. Oktober 1944

Die Hochdruckbrücke Azoren-Nordrußland scheidet noch immer die lebhafteste Westdrift der nördlichen Breiten von den zyklonalen Vorgängen im Bereich des kräftigen Tiefdrucksystems über dem westlichen Mittelmeer. Allerdings schwächt sie sich in ihrem mittleren Teil über England durch von Westen einziehenden Druckfall stark ab.

Innerhalb der nördlichen Westdrift ist das gestern bei den Mäyen gelegene Tief über Spitzbergen nach Nordosten gewandert. Hinter ihm ist in Nordnorwegen sehr starke Abkühlung eingeblieben, die in der oberen Troposphäre bis zu 15° beträgt. Die damit verbundene weitere Verstärkung des Druckgradienten führt zur Schwächung des nordrussischen Hochs an dessen Nordflanke. In Mittelnorwegen sind die Temperaturänderungen nur gering. Hier setzt bereits die Warmfront einer neuen, im Raum südostwärts Island anzunehmenden Vorung an, deren Kaltfront hart vor den Hebriden angekommen werden muß. Durch die Verstärkung der nördlichen Zirkulation im Norden hat sich die Hochdruckbrücke in der Höhe etwas nach Süden verlagert, was die Abkühlung mit Feuchtzunahme und das in Abkühlung übergehende Abkühlen über der Nordsee bewirkt.

Auf der Südseite der Zone hohen Druckes fließt in zunehmendem Maße kontinentale Kaltluft antizyklonal nach Mitteleuropa ein. Hochrei-

chende Kaltluft mit Hebungsvorgängen ist aber erst im westlichen Ostpreußen bis etwa 2000m, nach Mitteleuropa flach anziehend, liegen die Temperaturen um 3-5° unter den gestrigen, ebenso nehmen die Feuchtwerte nach Westen hin zu, so daß das Aufklaren in der frischeren Kaltluft nur wenig nach Westen an Raum gewann.

Der über Spanien und Frankreich aufgetretenen Erwärmung muß südlich der Balearen und über dem Atlasgebiet Abkühlung gegenüberstehen, worauf die verbreiteten Niederschläge an der spanischen Levante-Küste hindeuten. Mit der weiteren Vertiefung des Mittelmeertiefs auf einen Norddruck von 916 mb hat sich an seiner Vorderseite über Oberitalien und den Ostalpen nochmals geringe Erwärmung eingestellt.

Die Lage über dem Atlantik ist noch ungeklärt. Bei weiterer Vorungstätigkeit über seinem Westteil ist noch nicht mit einem abschließenden Kaltlufteinbruch zu rechnen.
