Dez.00 bis Feb. 01

Winter

Die Südwestlagen (32 %) waren am häufigsten vertreten, gefolgt von Hoch über Mitteleuropa (23 %) und Westlagen (22 %). Die Südwestlagen überstiegen den vieljährigen Mittelwert um 25 % auf Kosten der anderen. Nordwestlagen (8 %), Nord- und Ostlagen (je 6 %) und Südlagen (3 %) hatten keinen wesentlichen Einfluss auf die Witterung, die deshalb zu warm und meist zu trocken war. Von den Südwestlagen entfielen 14 % auf den Januar, 10 % auf den Dezember und 8 % auf den Februar. Das Hoch über Mitteleuropa verteilte sich zu je knapp 7 % auf Dezember und Januar und zu 10 % auf den Februar. Die Westlagen konzentrierten sich mit 18 % auf den Dezember und 4 % auf den Januar. 54 % dieser Wetterlagen waren zyklonal und 46 % antizyklonal geprägt.

Der Gebietsniederschlag bezogen auf Deutschland (154 mm) lag 13 % unter dem Durchschnitt. Verantwortlich hierfür war der um 34 % zu trockene Dezember mit Defiziten von 10 % (Rheinland-Pfalz) bis 54 % (Sachsen) und der um 6 % zu trockene Januar mit Defiziten von 21 % (Schleswig-H.) bis 41 % (Sachsen). Der Februar war um 7 % zu nass. Dies entsprach einer Niederschlagshöhe von weniger als 100 mm um Würzburg und gebietsweise von der Ostsee bis zum Nordrand von Thüringer Wald - Erzgebirge. Mehr als 200 mm betrug sie in den meisten Mittelgebirgen und im Alpenbereich, wobei es mehr als 400 mm im Oberharz, im Nordschwarzwald und auf den höchsten Gipfeln der Alpen waren. Einzelwerte: von 47 mm (Erfurt) bis 456 mm (Brocken). Abweichungen: von -61% (Gera) bis 38 % (Hahn/Hunsrück).

März 01 bis Mai 01

Frühling

Mit einem Plus von je 15 % gegenüber dem vieljährigen Mittelwert waren die Westlagen (35 %) und die Nordlagen (33 %) besonders häufig. Es folgten die Südlagen (17 %), Ostlagen (9 %) und Südwestlagen (5 %) sowie Übergangslagen (1 %), die zu der im Norden nur wenig zu warmen und trockenen, im Süden bis zu 2 K zu warmen und zu feuchten Witterung beitrugen. Nicht aufgetreten sind Hochdrucklagen über Mitteleuropa, die im vieljährigen Mittel zu 12 % vertreten sind. Auch die Nordwestlagen (im Mittel 7 %) fehlten in diesem Frühling. Die Westlagen hatten ihre Schwerpunkte im März (15 %) und April (13 %), bei den Nordlagen war es ähnlich mit 11 % im März und 14 % im April. Im Mai waren die Westlagen mit 7 %, die Nordlagen mit 8 % vertreten. Insgesamt waren 71 % der Wetterlagen zyklonal und 28 % antizyklonal geprägt.

Der Gebietsniederschlag bezogen auf Deutschland (209 mm) lag 14 % über dem Durchschnitt. Deutlich zu nass war der März (+ 78 %) mit Überschüssen von 14 % in Niedersachsen und Bremen und vor allem im Süden (bis 162 % in Bayern südlich der Donau). Ebenfalls zu nass war der April (+ 18 %) mit Überschüssen bis 51 % (Rheinland-Pfalz, Saarland). Im trockenen Mai (- 44 %) konnte der Niederschlagsüberschuss des Frühlings trotz der Defizite von 26 % in Schleswig-Holstein bis 75 % in Rheinland-Pfalz/Saarland jedoch nicht ausgeglichen werden. Weniger als 100 mm Niederschlag fielen auf Sylt und vom Wendland bis zur Oder. Mehr als 300 mm fielen im Oberharz, im Thüringer-, Bayerischen- und Schwarzwald, örtlich auf der Schwäbischen Alb, am südlichen Oberrhein und im Alpenbereich. Mehr als 500 mm waren es auf dem Großen Arber, örtlich im Schwarzwald und in den Alpen. Einzelwerte: 85 mm (Sylt) bis 668 mm (Zugspitze). Abweichungen: -33 % (Sylt) bis 60 % (Hahn/Hunsrück).

Juni 01 bis Aug. 01

Sommer

Der Sommer war bestimmt von Westlagen (31 %) und Hochdruck über Mitteleuropa (29 %). Bei den Westlagen wurde das vieljährige Mittel um 5 % überschritten. Sie traten häufig im Juni (14 %) und August (10 %), seltener im Juli (7 %) auf. Die Hochdrucklagen waren im Vergleich zum vieljährigen Mittel (16 %) stark überrepräsentiert, was auf ihre große Häufigkeit im Juli (15 %) zurückzuführen ist (Juni 7 %, August 8 %). Auch die Südlagen (15 %) traten gegenüber dem vieljährigen Mittel von 9 % häufiger auf. Sie konzentrierten sich auf Juli und August (je knapp 8 %). Nordwestlagen (11 %) gab es nur im Juni. Seltener waren die Ostlagen (11 %) gegenüber dem Mittel von 16 %. Vor allem die zu 16 % üblichen Nordlagen waren mit 3 % wesentlich zu selten und nur im August aufgetreten. Es gab keine Südwestlagen. Die Anteile der zyklonalen und antizyklonalen Wetterlagen waren im Sommer zu je 50 % ausgewogen.

Der Gebietsniederschlag bezogen auf Deutschland (225 mm) lag 5 % unter dem vieljährigen Durchschnitt. Dem um 7 % zu nassen Juni mit Überschüssen bis zu 31 % (Niedersachsen/Bremen) folgten ein um 9 % zu trockener Juli und ein um 13 % zu trockener August; beide insgesamt zu trockenen Monate fielen in den Ländern unterschiedlich aus: im Juli von 46 % Defizit (Mecklenburg-V.) bis 60 % Überschuss (Sachsen-Anhalt); im August von 49 % Defizit (Thüringen) bis 40 % Überschuss (Schleswig-Holstein). Weniger als 150 mm Niederschlag fielen auf Fehmarn, vom Oderbruch bis zum Spreewald, um Hannover, in Teilen Frankens und der Pfalz. Mehr als 300 mm gab es um Emden und Lübeck, örtlich im Thüringer Wald, in Harz, Bayerischem und Schwarzwald, teilweise am Oberrhein und südlich der Donau, mehr als 500 mm in den Alpen. Einzelwerte: 115 mm (Lindenberg/ Brbg., Weinbiet/Pfalz) bis 635 mm (Oberstdorf). Abweichungen: -43 (Michelstadt-V./Odenw.) bis 55 %(Lübeck).

Sept.01 bis Nov. 01

Herbst

Es dominierten die Nordwestlagen mit 36 %, gefolgt von Westlagen mit 23 %. Im vieljährigen Mittel wären umgekehrt nur 6 % Nordwestlagen und 30 % Westlagen zu erwarten. Die Nordwestlagen prägten den November (23 %) und den September (13 %), dafür überwogen die Westlagen im Oktober (16 %) und fehlten im September. Die Häufigkeiten der Südwestlagen mit 11 % sowie der Südlagen mit 9 % lagen im vieljährigen Schnitt (9 % bzw. 12 %) des Herbstes. Diese Wetterlagen kamen hauptsächlich im Oktober vor (10 bzw. 8 %), im November gar nicht.Charakteristisch waren die seltenen Hochdrucklagen über Mitteleuropa (7 %, je zur Hälfte im September und November) im Vergleich zum Mittelwert von 20 % und die geringe Häufigkeit von Nordlagen(4 % gegenüber 12 %). Diese kamen nur im September vor. Tiefs über Mitteleuropa traten mit 7 % häufiger auf als im vieljährigen Mittel (2 %), Ostlagen mit 3 % waren weniger dominant (im Mittel 9 %). Insgesamt überwogen die zyklonal geprägten Wetterlagen mit einer Häufigkeit von 62 %. Den größten Beitrag dazu lieferte der September mit 48 %.

Der Gebietsniederschlag bezogen auf Deutschland (257 mm) lag 42 % über dem Durchschnitt. Der September war mit 124 % Überschuss ein wesentlich zu nasser Monat, in dem für die Länder mindestens + 65 % (Rheinland-Pfalz/Saarland) bis zu 192 % (Mecklenburg-V.) zustande kamen. Auch im zu nassen November (+ 18 %) wurde in mehreren Ländern ein Überschuss bis 47 % (Thüringen) erreicht. Im Oktober mit einem Defizit von 21 % und maximal 8 % Überschuss in Baden-Württemberg konnte die hohe Niederschlagssumme der Jahreszeit nicht ausgeglichen werden. Weniger als 150 mm Niederschlag fielen bei Leipzig, um Magdeburg und örtlich in Thüringen. Mehr als 300 mm betrug sie in Bremerhaven, verbreitet in Schleswig- Holstein und nördlichem Niedersachsen, in vielen Mittelgebirgen, im Breisgau und im Alpenbereich, wobei es mehr als 500 mm örtlich in Rothaargeb., Thüringer und Bayer. Wald, in Schwarzwald, Harz und den Alpen waren , im Oberharz mehr als 700 mm. Einzelwerte: von 131 mm (Artern/Thüringen) bis 771 mm (Brocken). Abweichungen: von 0 % (Sylt) bis 84 % (Stötten/Schwäb.Alb).

TEMPERATUR

SONNE

Die Tagesmittel waren überwiegend positiv. Mehr als 4 °C ergaben sich auf Helgoland und vom Nieder- bis zum Oberrhein (Freiburg i. Br. 5.9 °C). In den Mittelgebirgen oberhalb ca. 700 m über NN und in den Alpen waren sie negativ (Fichtelberg/Erzg. -2.8° C, Zugspitze - 9.6 °C).
