1) **Abweichung** vom vieljährigen Mittel (1961-1990)

Kein Wert bedeutet kein Mittelwert vorhanden.

2) **K** = Kelvin (1 Kelvin $\hat{=}$ 1°C)

3) **MAX** = Maximum

4) **MIN** = Minimum

5) **MIN am Erdboden** = (5cm über Grund) Tiefstwert in der

Zeitspanne von 01.00 Uhr bis 01.00 Uhr MEZ des Folgetages

6) **Sommertag** = Temperaturmaximum 25.0° C und höher

7) **Heißer Tag** = Temperaturmaximum 30.0° C und höher

8) **Frosttag** = Temperaturminimum unter 0° C

9) **Eistag** = Temperaturmaximum unter 0° C

10) **Sichtweite < 1000 m z.T.** automatisch registriert $\hat{=}$ Nebel

11) % = Bezug zum vieljährigen Mittel (1961-1990)

1) Automatische Messstelle

2) Messstelle mit eingeschränktem Meldesoll

Mittel = Tagesmittel der Lufttemperatur, berechnet aus den Messwerten der Stundentermine 01.00 Uhr MEZ bis 24.00 Uhr MEZ (arithmetisches Mittel).

MAX = Tagesmaximum der Lufttemperatur, Höchstwert in der Zeitspanne von 01.00 Uhr MEZ bis 01.00 Uhr MEZ des Folgetages

MIN = Tagesminimum der Lufttemperatur, Tiefstwert in der Zeitspanne von 01.00 Uhr MEZ bis 01.00 Uhr MEZ des Folgetages

DER WETTERPARK OFFENBACH WETTERPHÄNOMENE ERLEBEN UND VERSTEHEN

Kann man auf einer Wolke liegen? Hat Luft wirklich ein Gewicht? Wie entstehen Regen oder Schnee? - Wetter?! Was genau ist das eigentlich?

Antworten darauf gibt der Wetterpark in Offenbach. Der Themenpark im Naherholungsgebiet "Buchhügel" ist einmalig in Europa.

Als öffentliche Parkanlage bietet er sowohl Naherholung als auch wissenschaftliche Informationen zum Wettergeschehen in anschaulicher Form. Exponate, Grafiken und Texte verdeutlichen an 10 Stationen die wichtigsten Aspekte des Wetters und seiner Erscheinungen. Alles ist ohne Führungen verständlich.

Unterschiedliche Wetterphänomene werden erlebnisreich und "begreifbar" dargestellt. Da gibt es z.B. das **GEWITTER**: Bis zu 60.000 Ampere jagen bei einem Gewitter durch den nur 12 mm dicken Blitzkanal. Ein vom Blitz getroffener Eichenstamm verdeutlicht Ihnen anschaulich die Wirkung von Blitzeinschlägen.

LUFTDRUCK - Wir spüren gar nicht, welche Last auf uns liegt. An dieser Station können Sie ein Gewicht hochheben, das so schwer wie 27 m³ Luft ist - genau die Menge, die in den daneben stehenden Würfel passt.

WIND - er sorgt für Ausgleich zwischen Hoch und Tief, zwischen warm und kalt.

Ein Feld von 20 roten Windfahnen hilft Ihnen, die momentane Richtung zu bestimmen.

Weitere Themen:

Tornados und globale Windzirkulationssysteme.

Der Spaziergang führt uns weiter zum Motor unseres Wetters, zur Station **SONNE**: Sie lässt Tag und Nacht, die Jahreszeiten, Wind und Wetter entstehen. Lesen Sie an der Sonnenuhr die Zeit ab und erleben Sie auf mattschwarzen Untergrund die Umwandlung der Sonnenstrahlung in Wärme.

WOLKENARTEN werden auf Schautafeln vorgestellt und der **NIEDERSCHLAG** wird hörbar gemacht. Wetter ist spannend und im Regionalpark Rhein-Main wird Wetter zum Erlebnis!

Der Deutsche Wetterdienst hat auf dem Gelände eine vollautomatische Wetterstation neuesten Typs aufgebaut. Ein Display zeigt Ihnen aktuelle Messwerte, Vorhersagen und später auch Warnungen. Im internationalen phänologischen Garten können Sie die Entwicklungsstadien ausgewählter Pflanzen beobachten.

Der Wetterpark ist ein öffentlicher Park.

Der Eintritt ist frei.

Eine Wegeskizze und weitere Informationen finden Sie im Internet unter: www.wetterpark-offenbach.de

1) **Abweichung** vom vieljährigen Mittel (1961-1990)
Kein Wert bedeutet kein Mittelwert vorhanden.

2) **K** = Kelvin (1 Kelvin $\hat{=}$ 1°C)

3) **MAX** = Maximum

4) **MIN** = Minimum

5) **MIN am Erdboden** = (5cm über Grund) Tiefstwert in der
Zeitspanne von 01.00 Uhr bis 01.00 Uhr MEZ des Folgetages

6) **Sommertag** = Temperaturmaximum 25.0° C und höher

7) **Heißer Tag** = Temperaturmaximum 30.0° C und höher

8) **Frosttag** = Temperaturminimum unter 0° C

9) **Eistag** = Temperaturmaximum unter 0° C

10) **Sichtweite < 1000 m z.T.** automatisch registriert $\hat{=}$ Nebel

11) % = Bezug zum vieljährigen Mittel (1961-1990)

1) Automatische Messstelle

2) Messstelle mit eingeschränktem Meldesoll

Mittel = Tagesmittel der Lufttemperatur, berechnet aus den Messwerten der Stundentermine 01.00 Uhr MEZ bis 24.00 Uhr MEZ (arithmetisches Mittel).

MAX = Tagesmaximum der Lufttemperatur, Höchstwert in der Zeitspanne von 01.00 Uhr MEZ bis 01.00 Uhr MEZ des Folgetages

MIN = Tagesminimum der Lufttemperatur, Tiefstwert in der Zeitspanne von 01.00 Uhr MEZ bis 01.00 Uhr MEZ des Folgetages

SWIS - Gute Fahrt bei jedem Wetter

Straßenwettervorhersagen für gezielten Winterdienst

Die Winter stellen sich launenhaft dar.

Glatteis, Schnee, Reif und überfrierende Nässe können Auto-, Radfahrer und Fußgänger gleichermaßen in die unangenehmsten Situationen bringen. Deshalb erstellt der Deutsche Wetterdienst (DWD) mit großem Verantwortungsbewusstsein seine Straßenwettervorhersagen.

Von Profis für Profis

Damit Fahrzeuge, Tau- und Streumittel effektiver eingesetzt werden können, hat der DWD zusammen mit den Straßenbauverwaltungen der Länder das **Straßenzustands- und Wetterinformations-System (SWIS)** entwickelt. Es stellt eine ideale Hilfe für das Winterdienst-Management dar.

SWIS erlaubt eine effektivere Planung der Ressourcen und gibt konkrete Entscheidungshilfen.

Handfeste Informationen

Rund um die Uhr unterstützt der DWD die Autobahnmeistereien und kommunale Winterdienste, damit diese zur rechten Zeit am richtigen Ort streuen und räumen können. Durch SWIS-Straßenwettervorhersagen können bereits 1000 Autobahn- und Straßenmeistereien ihren Dienst optimal leisten. Detailliert in 3-Stunden- und 200-Meter-Höhenintervallen werden sie informiert.

Die mittelfristige Straßenwettervorhersage

Pünktlich um 10:00 Uhr liegt sie auf dem Tisch. Sie sagt, was vom Mittag des Folgetages bis zum Mittag des 3. Folgetages zu erwarten ist.

Die allgemeine Straßenwettervorhersage

Sie enthält eine Orientierung zur Wetterentwicklung in den nächsten 24 Stunden. Diese Vorhersagen werden - je nach Bedarf - um 07:00 Uhr, um 10:00 und um 12:00 Uhr ausgegeben. Sie gelten jeweils bis zum Mittag des Folgetages.

Die detaillierte Straßengebietswettervorhersage

Sie informiert in Tabellenform über das Geschehen in eng begrenzten Klimagebieten. In bergigen Regionen ist sie nach Höhen gestaffelt. In 3-Stunden- und ggf. 200 Meter-Höhenintervallen beraten wir, was in den nächsten 24 Stunden zu erwarten ist. Tagtägliche Einsätze können so genauestens festgelegt werden.

Straßenwetterhinweise

Bei kritischen Wetterlagen weisen wir rund um die Uhr auf Niederschläge hin, die zu plötzlich auftretender Straßenglätte führen können. 2-4 Stunden vorher warnen wir. Eine umgehende Reaktion wird möglich. Durch diesen Einsatz können Staus und Unfälle vermieden werden.

SWIS-Vorhersagen zur Steuerung des Winterdienstes bieten wir auch Kommunen, Flughäfen, privaten Räum- und Streudiensten etc. an. Die Voraussagen erreichen auf allen modernen elektronischen Wegen die Empfänger: z.B. online von PC zu PC oder per Fax. In besonders kritischen Situationen kann auch eine individuelle, persönliche Betreuung der gewerblichen Nutzer per Telefon vereinbart werden.
