PRAESTITUTO tempore foras hoc anno prodeunt Ephemerides noſtrae, quod impedimenta, quae moram iisdem edendis anno ſuperiore injecere, e medio omnia ſuſtulerimus.

In eadem forma, qua volumen praecedens, & hoc comparet, id eſt, in duas partes diſtributum, ſecus aliquanto, quam in ſex voluminibus prioribus, concinnatas. Hanc tamen formam, quod multis non ſatis arriſerit, refundere aliquatenus anno proximo, & commu-

tare

tare in clariorem cogitamus, quae ad priſtinam proxime accedat, compendio operis aliunde accerſito, lectoribus omnibus, velut ſperamus, idcirco facile probando, quod rei nullum, aut leve certe detrimentum in univerſum ſit adlaturum.

Quod obſervationes ſtationum nonnullarum in parte I integrae, ut olim fieri conſuevit, impreſſae conſpiciantur, id inde factum eſt, quod inſtantes nundinae Lipſienſes, in quibus vulgare hoc volumen firme ſteterat, in epitomen ſolitam eas cogere non ſiverint.

In ea, quam jam diximus, parte I praeter conſuetas obſervationes & adnotationes ſequentia memoratu praecipue digna lector reperiet. Barometrographicae obſervationes, ſtatum mercurii ſingulis quaternis minutis exhibentes, Manheimii continuatae ſunt, ex quibus conditae ſunt tabulae, quae omnes barometri variationes notabiles ob oculos ponunt. Regula, quam ex eis initio ſtatim deduximus, barometrum ſcilicet ſole meridianum diu noctuve tranſeunte deſcendere, firma manet. Nuntiare inſuper amatoribus nunc poſſumus, id, quod futurum anno praecedente affirmavimus, jam operi datum eſſe, tabulam nempe circula-

cularem, in qua puncta ſua graphium hactenus expreſſit, cura HEMMERI & dexteritate horologiorum artificis Manheimenſis KRAPP in rectam commutatam eſſe, qua re fiet, ut motus omnes, quos barometrum per totum annum ſingulis quodammodo momentis ſubit, linea continente & fere unica in tabulis directo limite procurrentibus oculo ſiſti poſſint. Aeri olim incidendas curare has tabulas propoſitum nobis eſt, qua opera & ſcientiae meteorologicae ipſi emolumentum non leve, & voluptatem ejus amantibus adlaturos nos eſſe confidimus. Optandum maxime eſſet, ut plures ſtationes, magno inter ſe ſpatio disjunctae, obſervationes eadem hac machina factas eodem modo ederent. Emerſurum hinc inſigne commodum nemo non videt.

Cum frigus inſolitum aeterno memorabilem hunc annum reddiderit, ſchema ſtatus thermometri, aëri undique patentis, in menſem Decembrem obſervationibus Manheimenſibus adjunctum eſt. Ibidem quoque memoriae proditum reperitur, Rhenum modo undecimo ejusdem menſis die gelu Manheimii concreviſſe, quod in omni hominum vita tam mature factum non eſt, & acerbitatem hujus frigoris mirifice confirmat.

Ita

Ita late per Europam saeviit hoc anno frigus, ut vel temperatas regiones magnopere infestarit. Quae res diligentissimum societatis observatorem Rupellensem SEIGNETTE impulit, ut hiemis ex anno 1788 in 1789 protensae peculiarem historiam conscriberet, annotationibus ejus specialibus subjectam.

Documenta conjunctionis intimae inter auroras boreales & fulgura jam in duobus posterioribus voluminibus dedimus. Manifesta ejusdem rei argumenta hoc anno suffecerunt Manheimii dies quartus Januarii & Martii vigesimus secundus, quibus eaedem nubes jam luce electrica, jam boreali resplenduerunt, & inverso quidem ordine, ita ut, quae lux in una nube praecedebat, eadem in nube altera sequeretur. Observatio, eandem conjunctionem probans, facta est Patavii die prima Martii.

Cum auroris borealibus variationes etiam acus magneticae aperte saepius colligatas esse, plus uno loco in tomis superioribus ostensum est. Ast nihil forsan uspiam reperire est, quod hunc nexum luculentius doceat quam observatio, die 22 Octobris Manheimii facta, ubi aurora borealis insignis apparebat, duas in partes divisa, borealem alteram, alteram occidentalem, luce vividissima alternis vicibus horae $1\frac{1}{2}$ spatio micant-

micantes, quo toto tempore acus commigrantem lucem jam in hanc, jam in illam plagam magno & conſtanti paſſu ſequebatur. Phaenomenum memoria imprimis dignum paucis in hoc volumine, ſed uberius in tomo ſexto phyſico commentationum academiae Theodoro-Palatinae expoſitum reperitur.

Annotationes ſuas ſpeciales auxit cl. ſodalis noſter TOALDO univerſalibus in anni totius conditionem, in quibus & frigoris immanitatem praecipue memorat, quod in mitiſſimo illo coeli tractu extitit, & quam vim diverſa anni tempora in agriculturam exſeruerunt, ſtrictim docet.

Quam late quandoque redundans in coelo electrica materies diffundatur, argumento luculento eſt atrox tempeſtas fulminea, quae die 21 Junii hic exorta vicina loca complura, praeſertim in ditione Landſtulana & adjacente ducatus Bipontini parte, venti, aquarum & grandinum immani vi miſerrime afflixit. Extitit eadem tempeſtas ſub idem tempus, ſcilicet vel eo ipſo die, quem diximus, vel uno citius ſeriusve, in locis ſequentibus, immenſo terrarum tractu a ſe invicem remotis.

Saeviit biduo ante Rupellae, die nempe 19 Junii, grandinem non procul inde ejaculata, qua percuſſae ſegetes ingens damnum paſſae ſunt, quod in iſta provincia, praecipue in locis a mari parum diſſitis, vix umquam contingere cl. SEIGNETTUS teſtatur.

Defectum hygrometrorum, quae, velut in praefatione voluminis ſuperioris monuimus, multis in ſtationibus inutilia facta ſunt, explere hactenus non licuit, quod conatus noſtros in perficiendis hiſce inſtrumentis optatus exitus nondum coronarit. Qui admota operi manu naturam ipſam hac in re tentaverit, is profecto impedimenta exſpectatione longe majora omni parte reperiet.

Ad

Ad obſervationes in conſuetis ſtationibus noſtris inſtitutas accedunt hoc anno nonnullae, cum in africanis inſulis Franciae & Borbonii, tum in aſiatica urbe Punah factae. Utrasque nobiscum perhumaniter communicavit vir doctiſſimus BRUNEL, academiae ſcientiarum Bliterrenſis, uti & ſocietatis noſtrae meteorologicae ſocius. Eas tam ob extraordinaria, quae exhibent, phaenomena, quam ob ſingularem acus magneticae declinationem, faſtis noſtris digniſſimas judicavimus.

Multo locupletior hoc quam ſuperiore anno evaſit pars operis II, partim quod ſtatus meteorologicus diurnus, ob temporis anguſtias tunc multis locis omiſſus, nunc paſſim occurrat, partim quod pluribus novis capitibus adaucta exiſtat. Huc ſpectat ſitus lunae ad meridianum Manheimenſem, ſtatus medius diurnus libellae maris baltici, ſtatus barometri ad ſitum lunae ex trium dierum obſervationibus relatus.

Duo ſunt, quae coronidis loco literarias ſocietates omnes, quibus inſtrumenta Electoralia credidimus, humaniſſime rogamus. Primum eſt, ut obſervatoribus, aut morte aut alia ratione a munere ſuo abſtractis, novos quamprimum ex data fide ſufficiant, ne obſervationes interrumpantur, aut jam interruptae diutius deſiderentur. Alterum eſt, ut

eorum,

eorum, quibus obſervandi provinciam demandarunt, ſi forte diem ſupremum obierint, vitae curſum, resque in republica literaria geſtas paucis nobis impertiantur, quo memoriam eorum hoc ipſo in opere, cujus participes fuere, monumento aliquo ſempiterno conſecremus.

Morbi epidemici nulli, ſporadici a bile & rheumate varie ludentes ſub larva febrium omnis generis, quae plerumque exanthemate cutis ſolvebantur. Intercurrentes morbi boni genii ſcarlatina, urticata, varioloſa febris omnis aetatis hominum.

APRILIS, MAJUS, JUNIUS.

Aër continuo humidus & ſubfrigidus. Sereni dies rari. Inundationes repetitæ Rheni Nicarique humidum augebant quam maxime.

Infloreſcentia vitis viniferae L. imperfecta, fructuum horreorum eadem, & infloreſcentia & fructeſcentia. Animalia ob defectum nutrimenti boni rara, & idem de inſectis ob defectum ſolis.

Morbi menſium praecedentium cum acceſſoriis chronicis haemorrhoidum, arthritidis variae affectionibus. Sporadicae febres exaſperatae, & lethales phrenitide putrida rheumatica, intercurrentes rariores.

JULIUS, AUGUSTUS, SEPTEMBER.

Aëris genius continuat, & inundationes laetae ſpem meſſis devaſtant, aërem putredine corrumpunt.

Fructificatio frumentorum non lauta, vini fere nulla, fructuum horreorum inſipida, aquoſa.

Morbi iidem eodem pergunt tramite. Acceſſorii morbi intermittentes febres tertianae, ſimplices & duplices a bile & rheumate. Vermes in infantibus frequentes harum febrium cauſſa ſunt.

ANNOTATIONES SPECIALES
IN OBSERVATIONES MANHEIMENSES.

JANUARIUS.

Die 4. vesp. h. 7.1/2 nubes in NW cinerea valido cum vento apparuit, magno nubium electrometro, non obstante aëris insigni humiditate, signa electricitatis manifesta dante, filis oblato ungui digiti adhaerentibus. Postea lucem candidam haec nubes & undantem e margine orientali effudit. Apertus iteiterum consensus inter *AB.* & electricitatem.

9. Post hor. 6 vespertinam fascia insignis rubea, viae lacteae parallela in W ex horizonte emicabat. Nubes cinerea in NW consistens lucem candidam e parte sui occidentali emittebat. Nubes haec paulo post moveri versus fasciam rubram citato passu coepit. Ubi luces ambae se contingebant, rubea disparuit, candore per totam nubis longitudinem diffuso, qui sensim diminutus evanuit,

15—17. Insignis barometri altitudo flante W, & coelo continuo tecto, quod phoenomenon insolitum est.

23—24. Ventus admodum vehemens barometro non multum variante, quod insolitum.

MARTIUS.

Die 22. Aurora primum borealis, dein fulgura crebra ex cinerea nube ad occidentem consistente emicuere.

JUNIUS.

Die 21. Nubes fulmineae multae a tota meridie hic transiere, igne copioso in magnum electrometrum, sine fulgure tamen & tonitru, transfuso. Hoc die in comitatu Landstulano & adjunctis ducatus Bipontini locis atrociſſima tempestas, aquas immensas e nubibus & grandines horrendae magnitudinis ejaculata, frugibus, leguminibus, trifolio, foeno, pomis, prostratis, dejectis, perditis, ingentibus cumulis lapidum & arenae e collibus in prata camposque devolutis.

OCTOBER.

Quatuor prioribus hujus menſis diebus coelum fere ſemper totum obductum, quamquam barometrum toto hoc tempore locum altum teneret, & a die ſecundo ad quartum adeo continuo aſcenderet. Die quinto & ſexto, cum barometrum in deſcenſu eſſet, coelum ſerenatum eſt; at nocte diem ſeptimum praecedente, qua barometrum celeriter, ſcilicet 1.6/10 lin. aſcendit, iterum totum nubibus tectum eſt.

Die 21 (& 22 mane) inſignis acus variatio, quin veſtigium *AB* apparuerit. Nubes autem foetae multae cum valido vento tranſiere.

Die 22 Veſp. aurora borealis praeſtans, quaſi bipartita, altera in N, in W altera. Ante 8 veſpertinam in conſpectum prodiit, ſtriis albis diſtincta, quae 9.1/2 ſanguinea rubedine alternis pingebantur, eam legem ſervante, ut, ſi in W augebatur, minueretur in N, aucta in N, in W decreſceret. Mira fuit acus variatio meteoro hoc durante, ex qua ſi umquam, hac certe vice utriusque intima conjunctio luculenter apparet. En, quas horae 1.1/2 ſpatio obſervavi, variationum ſchema.

Hor.	min.		declin.	
9.	0	—	20, 9	albet coelum in N & W,
	40	—	19, 36	rubet in N,
	45	—	20, 45	rubet in W vividiſſime,
	48	—	20, 21	pallet in W,
	51	—	20, 9	pallet magis in W,
	55	—	20, 3	ſtria nova rubra in NW,
	58	—	20, 0	hujus ſtriae rubor augetur,
10.	0	—	19, 50	fulgor magnus in N,
	6	—	19, 36	rubor in N,
	15	—	19, 42	rubor in NW,
	17	—	19, 52	ſtriae plures in NW, pallet in N,
	19	—	20, 3	defluxit omnis rubor in N,
	24	—	19, 45	candor in N quam in W major,
	30	—	19, 36	ſtriae nigrae longius excurrunt ex N in O.

Cum jam emori meteorum videretur, finem obſervandi feci. Poſtridie mane acus ad locum redierat, ubi ante rubedinem ſtriis inductam veſpere ſteterat. Quod mane & pridie veſpere acus modo variationem inſolentem ſubierit, indicio eſt, auroræ borealis materiem inviſam tunc modo coelo inhaeſiſſe.

NOVEMBER.

Sub ipſum hujus menſis initium frigus, & cum hoc hyems modo ingruit, quod in his terris inſolitum. A die 25 thermometrum diu noctuque infra 0 haeſit, ita, ut ſuper hoc usque ad menſis finem ne quidem circa meridiem umquam emerſerit, manifeſto frigoris perdurantis argumento.

DECEMBER.

Hoc menſe frigus non ſolum, ut ſub finem Novembris, perduravit, ſed & magnopere invaluit. En breve ſchema ſtatus thermometri, in tabulato ſpeculae meae aëri omni parte expoſiti.

Electricae materiae in atmoſphaera vis inſignis. Id nubes coelo haerentes vel transeuntes, id faſciae frequentes, id aurorae boreales oſtenderunt.

Die 5. Acus magnetica toto die immota ſtetit, ex quo tempore non tantum recedere, ſed exiguas etiam quotidie variationes facere coepit.

11 Rhenus gelu concrevit, ita, ut eodem die nautae nonnulli illum pedites ſuperarint, quod poſtridie omnis hominum multitudo, & deinceps jumenta etiam, rhedae & plauſtra fecerunt. Poſt hominum memoriam hic flauvius Manheimii non tam mature conglaciatus.

14. Nubes praegrandis atra, tempeſtatis fulmineae atrocis in ſpeciem ferax, in W S W ſtetit.

16. Quae a 9 veſpertina per totam noctem usque ad medium diem poſterum duravit, aurora borealis ex ipſo horizonte, ſine apparente nube cinerea, emergens, candore miro fulgens, virgas latas & longiſſimas verſus N O evibravit.

18. Notabilis denuo eſt hac die ac nocte ſequenti barometri delapſus & acus magneticae regreſſus. Coorta a meridie ex W procella, continuata in noctem, qua ſaeviente electricitas aëris continuo poſitiva erat.

19. Plenilunium & biduum ante perigaeum. Procella, quae die jam heſterna inchoavit, per quatriduum durabat, nivibus interruptim deciduis. Furente hac procella electricitas ſemper poſitiva fuit.

FEBRUARIUS.

Die 11. Poſt ſolis occaſum totus horizon occidentalis inſigni albore colluſtratus apparebat. Hora 9 in N poſt nubem cineream aurora borealis cum faſciis valde mobilibus, ſuperius rubeſcentibus. Durabat usque ad h. 11. Acus magnetica, triduum ante jamjam inquieta, 23 circiter minutis ad O regreſſa eſt.

*) Eandem & auroram borealem, & acus declinationem Manheimii obſervatam fuiſſe, novellae referebant.

22 — 29. Inſignes his diebus cum barometri, tum acus magneticae variationes ac motus. Venti potiſſimum procelloſi. Electricitas aëris vix obſervabilis.

MARTIUS.

Die 2 Nebula, qua nocte praecedenti involuti ſumus, mane infra montem depreſſa, omnem qua longe lateque patet, regionem alte obtegit, ita, ut forma ac ſitu ſuo mare referret cujus e medio mons Peiſſenbergenſis tanquam inſula eminebat.

3. Ventus procelloſus ex W tota die deſaeviit, barometro heri & hodie multum aſcendente; nives per intervalla. Duravit procella usque ad diem 8 menſis, ad novilunium nempe, quocum & venti tranquillitas, & favorabilior veniebat tempeſtas.

Die 22. Poſt ſolis occaſum in horizonte occidentali ingens albor, late extenſus. Poſthac in N quaedam aurorae borealis ſpecies, quam & acus declinatoria ſuo indicare progreſſu viſa eſt.

APRILIS.

Die 1. Usque ad 6, quo novilunium incidebat, barometri aeque ac acus declinatoriae variationes maximae ac ſaltuoſae; venti procelloſi; pluviae ac nives interruptae; indicia electricitatis atmoſphaericae in magno nubium electrometro & crebra & fortia.

29. Ab hora 7 ad 9 veſp. in NNW albor inſignis, late diffuſus.

MAJUS.

Die 5. Veſpere in NW inſignis albor, longe protenſus.

6. Poſt ſolis occaſum idem albor, uti heri.

14. Summo mane nix larga decidit, ita, ut mons veluti in hyeme, penitus albeſceret. Infra montem nix nulla conſpiciebatur.

15. Nebula globoſa infra montem depreſſa mare fluctuans efformabat. Hora 9 motu lento verſus W agitata in nubes ſubnigras abiit, ex quibus hora 2 crebra audivimus tonitrua. Vento ONO dein declinante in W tempeſtas tonitrua ad nos adferebatur concomitante pluvia. Barometrum per totam diem aſcendebat.

24. Atmoſphaera denſis repleta fuit vaporibus, vento ONO ſpirante. Poſt ſolis occaſum horizon occidentalis candore rubicundo nitebat.

25. A meridie regreſſus acus magneticae inſignis. Poſt ſolis occaſum ingens albor horizonti in NW incumbens.

28—30. Hoc triduo tonitrua ac fulgura crebra; declinationis acus magneticae variationes inſignes; abundans & fortis aëris electricitas.

JUNIUS.

Die 2. Poſt ſolis occaſum totus limbus horizontis ſeptentrionalis ruber apparuit, terminatus candore albo.

9. Hora 4 matutina in S audita tonitrua; tum ſaepius tempore pomeridiano. Hora 9 veſpertina in ſeptentrione poſt nubem cineream horizonti incumbentem indicia quaedam aurorae borealis.

11. Hora 10 pluvia deſiit; nebula modo elevari, modo relabi, elevari iterum, iterumque relabi, & ſic ſaepius alternando, usque dum hora 5 montem ex integro cinxit tenuitque.

25. Med. 10 noctis horizonte nubibus cincto in NW candor albus vividi coloris.

JULIUS.

JULIUS.

Die 11. 12. 13. Insignis ac omnium maxima caloris vis ac intensitas conjuncta cum maxima siccitate aëris.

*) Praeter evaporatorium ordinarium soli expositum his diebus experimentum feci cum alio vase perfecte aequali in umbra libero aëri exposito, & eam, quae sequitur, differentiam inter utriusque evaporationem reperi.

Evaporatio de 23 semunciis aquae pluvialis.

			Differentia.
Die 11 in sole	1196 gran. gall.	in umbra	629. 567
12 —	1349 —	— —	734. 615
13 —	1387 —	— —	764. 623

Coelum erat continuo maxima ex parte serenum; ventus O dominans.

29. Ab hora 7 mat. usque ad meridiem diei sequentis pluviae copia per totum annum maxima delapsa est. Incidebant hi dies in tempus perigaei ac novilunii.

AUGUSTUS.

Die 14 — 16. Procella triduana continuo ex W ruens cum pluvia interrupta. Barometrum postquam biduo ante notabiliter delapsum fuerat, superveniente procella elevatur, ascenditque continuo. Declinationis acus magneticae variationes insignes. Contigit haec procella tempore apogaei ac infimul plenilunii.

*) Nimia copia pluviae hoc mense delapsae calorem notabiliter diminuit, fructuumque collectionem difficilem reddidit, distulitque.

SEPTEMBER.

Die 2. Post solis occasum fasciae rubrae quasi radii ex eo loco, ubi occubuit, tanquam centro egressae, longe lateque protendebantur.

8. Omnis regio, qua longe lateque patet, nebula cooperta est; med. 9 sensim moveri, in nubes formari, ferri sursum, ad N & W retrahi. Occidente sole ab ejus loco fasciae rubrae quasi radii exeuntes, ad medium usque coelum extendebantur.

25. Montes Tyrolenses ac etiam proximiores recenti nive albescunt.

OCTOBER.

Die 9. Ventus vehementissimus tota die ex O saeviens; barometrum altum valde constitit, ac multum ex die jam hesterno ascendit.

10. Eodem continuante vento nives primo decidebant.

21. Procella tota die furens ex W, cum nebula ac nive usque ad meridiem diei sequentis.

Acus magnetica hac & heſterna die inſolite variabat. Electricitas nubium (ſeu atmoſphaerarum eas ambientium) modo poſitiva erat, modo negativa.

NOVEMBER.

Die 14. Prima hac poſt plenilunium die temperies aurae ſubito mutata eſt; hyems initium cepit cum nive ac nebula. Barometrum hac & heſterna die multum deſcendit, multumque progreſſa eſt acus magnetica. Frigus indies adeo increſcebat, ut ad diem 26 maximum attigiſſe gradum videretur, qui & anno ſuperiore in hunc diem incidit.

27. Ab hac die novilunii frigoris intenſitas notabiliter decrevit; ventus O mutatus ad W.

*) Dyſſenteria in adultis aeque ac junioribus frequens obſervatur.

DECEMBER.

Die 13. Ab hac die, qua plenilunium incidebat, gelu & nives modo inſueto creſcebant. Ventus O acerrime continuat.

24. Procella omnium maxima tota die deſaeviit; nives per aëra inſtar nebulae agitatae, ingentes in cumulos congeſtae; avulſi ab arboribus rami, aut omnino proſtratae arbores; viae nivibus obrutae, ac impeditae, ita, ut eundi de domo in domum vix locus ac facultas daretur.

25. Procella ſaeviſſima continuat. Veſperi ventus tranquillior, nivibus dein copioſis deciduis.

27. Frigus invaleſcit, ventus O acrior inſtat; altitudo nivium $4\frac{1}{2}$ pedes in monte noſtro aequat, 6 — 8 in locis humilioribus.

ANNO-

ANNOTATIONES
IN HIEMEM ANNI 1788—1789.

Hunc fere ſervabimus ordinem, quo quaeſtiones digeſſerunt tum P. COTTE *in diario phyſico menſis Maji, tum ſocietas reg. medic. in iis, quae praepoſuit peritis ſibi conſociatis.*

I.

DIE 19 Junii, quarto a Rupella milliario, grando cecidit, qua verberatae ſegetes notabile damnum perpeſſae ſunt; quod quidem in iſta provincia vix unquam contingit, praeſertim in locis a mari parum diſſitis. In caetero menſe imber decidit quaſi continuus.

Tres primi Julii dies ſereni fuere. Die 4 iterum defluere coepit pluvia, quae deinde ſingulis diebus usque ad decimam, ſed haud continua perſeveravit. Tempus autem, quod, etiam labente pluvia, incaluerat, poſtea ferbuit vehementius. Die 11 calor erat 22 gr. 7 dec. Die 12 autem 22, 2. Maximus fuit hic aëris aeſtus. Nocte ſequenti tempeſtas exorta eſt, quae Galliam luſtravit in NO procurrens. Vehemens & fere continuus fragor intonuit, uberrimus imber hora 7 mat. deſiit, & copiam aquarum dedit altitudinis 15 lin. cum 2 dec. Hora $5\frac{1}{2}$ mat. aliquantulum grandinis decidit. Reliqua aeſtas ſat calore tepuit, ſaepe humida & pluvialis. Coelum praedicta procella turbatum, poſt aliquot dies factum eſt ſudum.

Venti a 20 die Julii ad 8 Aug. a parte NNO ad WNW ſaepe deflexerunt; ſex ultimis diebus vi quadam ſpiraverunt. A die 8 ad diem 25 Auguſti, punctorum S & SW limites non praetergreſſi ſunt. Exinde ad punctum N rediere, unde non multum aberraverunt usque ad 16 Septembris. Sub finem iſtius menſis, duobusque primis diebus Octobris, ſaepius & fortius flavit SW, & vim pluviae ſat notabilem immiſit. Reliquo menſe fere conſtanter remanſerunt in parte N, violenti quidem diebus 8 & 9, ſatis vehementes diebus 18, 19 & 20, nec non 24; vehementiſſimi vero diebus 30 & 31. Multum erraverunt venti per quatuordecim primos Novembris dies, & ab omnibus punctis horizontis flaverunt. Terra virens erat & tardius perſeveravit vegetatio.

II.

Die 16 Nov. vehementiſſimus & frigidiſſimus flavit ventus a parte NNO. Die 17 frigoris erant grad. 2 cum 3 dec.; remiſit ſe tempus, & deerraverunt venti 20 & 21, 8 fuere caloris gradus. Sed die 22 mane gradus thermometri erat —0, 4. Die 23 —2, 1. Die 27 —4, 9. Frigus idem fere conſtanter permanſit ad finem menſis usque, ventus autem per idem tempus

NO & ONO, raro validus. A 10 ad 30 ne minimum quidem imbris decidit; tantum modo 29 aliquantulum pruinae vel nivis, quae vix notatu digna fuit.

Toto menſe Decembri perſeveravit frigus. Vim hujus temperavit nix congelata, quae die 2 decidit, & aquam dedit ad altitudinem 1 lineae cum 3 dec. Die 5 frigus factum eſt acerbius, mane —1, 7; h. 2 pom. —3, 8; h. 9 —2, 0. Nix cecidlt diebus 5, 6, 7 & 8, unde collecta eſt aqua ad altitudinem 5 lin. cum 5 dec. Die 11 & 12 arbores gelicidio onuſtae erant. Imber delapſus die 13, ſemper durante gelu, pavimenta cooperuit vitrea pruina. Per noctem vero a 15 die ad 16 pluvia decidit 4 lin. cum 7 dec., & pavimentis glaciem ſupernduxit. Diebus 14, 17, 18 & 19 glacies objecta ſoli diffunditur. Solvitur glacies diebus 21 & 22, licet liquor thermometri infra punctum o remaneat. Gelu aliquantulum ſe remiſit die 23, aliquanto magis die 24, iterumque magis die 25. Sed 26 gelu iterum fit acutum. Thermometrum, quod die 25 indicaverat +1, 8, & 26 +1, 4, veſpere die 26 indicabat —1, 4, & mane die 27 —2, 6. Frigus rapide creſcit die 30, veſpere h. 9 therm. indicabat —12, 2. Nullum quidem obſervavi gradum frigoris intenſiorem. Quidam vero, qui noctem totam pervigilaverant, retulerunt liquorem thermometri inferius depreſſum fuiſſe ad ſecundam usque horam matutini temporis. Hunc 31 die maxime depreſſum fore arbitratus eram, ſed praeter exſpectationem illum ad —11, 7 conſiſtentem inveni. Veſpere —1, 7 tantum indicabat. Aliquantulum pruinae delapſum erat diebus 28 & 29. Nix cecidit 30 & 31, poſtea gelicidium & demum paululum pluviae intra horas 4 & 5 veſpertinas. Copia aquae his poſtremis diebus producta erat, hora 9 veſpertina diei 31, 2 lin. 9 dec. Ventus qui toto fere menſe a parte NO flaverat (die 24 tantum a parte SW flabat), die 31 mane O erat & reliqua die S.

Tribus primis diebus anni 1789 gelu, cujus vis mane praeſertim pungebat, quaque die remiſſius erat, & per diem ſolvebatur glacies. Debilis erat ventus duobus primis diebus, & errabat intra SSO & WNW. Die 3 NNO erat, ſed debilis. NO factus eſt, & brevi aucta eſt vis illius. Veſpere therm. indicabat —3, 0. Die 4 mane —7, 3, & veſpere —8, 2. Die 5 mane —10, 3, & die 7 veſpere —11, 3. A die 3 ventus vehemens a parte NO flaverat. Poſt 7 diem minuitur vis frigoris. Die 8 mane therm. indicabat —4, 8. Ventus a parte NO ad partem S deflectit. Per noctem ceciderat nix, & per partem matutini temporis cadere perrexit. Pridie nix pariter delapſa fuerat, & paululum die praecedenti. Die 10 mane therm. indicabat —5, 0, & tamen, paulo poſt, a primis horis matut. diffundi incipit glacies. Haec etiam ſolvitur poſtera die. Die 12 mane, grad. therm. —3, 7. Per diem hanc & ſequentem gelu magis ac magis liqueſcit. Duobus his diebus aliquantulum pluviae delapſum eſt. Die 14 pluit, tribusque vicibus leviter tonat coelum interim fulgurans. A die 8 ventus mirum in modum errabundus ſaepe a diverſis horizontis partibus, ſaepe ab eadem parte perflabat. Quod hac hieme ſaepe accidit. Nec rarum etiam vento a puncto NO fortiter flante videre erat ſpiſſas nubes a punctis S & SW devectas; & tunc aliqua fiebat frigoris remiſſio. Nebula denſa in aëre diffuſa erat mane tribus primis diebus menſis, & veſpere diei 11.

Hac

Hac hieme mare glacie concrevit magna a littore diſtantia; quae quidem diſtantia major erat vel minor, prout ripa magis vel minus erat expoſita ſoli vel profluentibus aquis. Ab urbe in ſtationem navium proſpicienti ante oculos erat planities glaciei ad quatuor circiter millia paſſuum patens, aeſtu maris paſſim interrupta. Motus ille undarum frangendo glaciem, quae poſtea iterum coaleſcebat, iſtius ſuperficiem maxime aſperam & ſalebroſam effecerat. Glacies vero haerentes litteribus inſulae Reae, & inſulae Uliari, fretum interjacens fere omnino occludebant. Ambo promontoria littoris noſtri, urbi vicina, aliud *minimorum*, aliud vero *de chef-de bois* vocata fere conjungebantur, ita ut a ſtatione navium ad urbem appellentibus iter fere omnino occluderetur, & certe omnino intercluſum fuiſſet, ni aeſtu glacies bis quaque die in alvi medio ruptae fuiſſent. Inſula Rea praeſertim ab arenarum aggere, qui ab inſula protenditur, & nuncupatur *de Sablanceau*, usque ad lacunam anſeris (la foſſe de l'oye), & ad promontorium pagi, quod vernaculo ſermone *ars* dicitur, lata & forti cingebatur glaciei lamina, in qua detinebantur naves. Ab una ad aliam, aut ad terram ſiccis pedibus ire licebat. Haec zona integra ſimul a littore ſoluta eſt, ubi ſe remiſit gelu, & flante SW abrepta ad quandam diſtantiam, ſe in continentem dirigendo, navesque diverſas ſecum devehens, quas detinebat velut concatenatas; nec inde quidquam contigit mali.

Urbi vicinae non ſunt aquae decurrentes ſat altae, ut glaciei macies menſurari potuerit. Stagnantium autem aquarum magni congeſtus nulli niſi in foſſis urbem cingentibus, & in aliquot canalibus reperiuntur; ſed in his aut illis minima eſt aquae altitudo, in aliis vero aquae communis, & aquae marinae mixtio efficit, ut de glaciei macie nil certi concludi poſſit.

Ex caritate panis & laborum intermiſſione plebs tum in urbe, tum per agros magna premebatur miſeria, quae tamen magnis, ſaltem in urbe, ſublevata eſt auxiliis. Inter ea, quae quotidiano uſui inſerviunt, ligni focarii major erat penuria. Omnis fere copia ligni, quod hic comburimus, ad nos a Santonia, Carantone amne, & omnis fere carbo e pictonibus amniculo quodam *Moric* nuncupato devehitur. Iſti ambo gelu aſtricti erant.

Cum his in regionibus molae vento ſolo verſentur, gelu a molendo frumento non prohibuit.

III.

Tempus, quod gelu ſubſecutum eſt menſe Januario, temperatum fuit & humidum, vento deerrante ab OSO ad WNW — NO, die 30 factus eſt NO. Diebus 16 & 17 aliquantulum gelaverat. Die 31 mane pruina, quin immo & paululum glaciei terrae ſuperficiem cooperiebat. Nebuloſum fuerat coelum diebus 16, 18, 28 & 29. Pluvia parum denſa diebus 16, 18 & 21, denſior facta eſt diebus 24 & 25. Toto menſe Januario aquae pluviales dederunt altitudinem 1 poll. 7 lin. 7 dec.

Coeli temperies Februario humida fuit & parum frigida. Tribus tantummodo diebus gelavit, & remiſſe. Nebuloſus fuit aër, tonitru agitatus, & aliquantulum grandinis immiſit. Aquarum altitudo fuit 2 poll. 5 lin. $1\frac{1}{2}$ dec. Ventus a puncto SW conſtanter flavit paucis temporibus exceptis, quibus ad WSW & ad WNW aſcendit, brevi ad SW relapſus. Die 28 tantum flavit a parte NO & NNO. Vehemens fuit, & turbines tribus aut quatuor diebus eruperunt.

Menſis Martius initio frigidus, coelo interea nubilo. Aër frigidior & paulo magis apertus a die 4 ad 9. Die 8 therm. indicabat —3, 0, & aliquantulum nivis decidit. Die 10 coelum factum eſt pluvium, & ad 25 usque ſingulis diebus effuſa eſt pluvia, ventis ſaepius interea vehementer flantibus a puncto SW. Pluvia pariter delapſa eſt diebus 28 & 29. Die 30 crevit frigus, & flavit ventus NNO. Die 31 mane agrorum ſuperficies aliquatenus glacie conſtricta erat. Pluvialis aqua fuit altitudinis 1 poll. 1 lin. 1 dec.

Initia Aprilis pluvioſa. Die 7 coelum omnino ſerenum. Plures poſt viciſſitudines iterum perturbatur diebus 11 & 12. Die 11 quidem tonat, & nebulae offunduntur; die 12 tonitru, tantummodo per aëra divagatur. Sub finem menſis coelum alternis vicibus pluvium fuit, & nonnihil ſerenum. A puncto SW fere ſemper flavit ventus, pluriesque vehementer. Aqua iſto menſe delapſa dedit 1 poll. 8 lin. $9\frac{1}{2}$ dec.

Menſis Majus ab iis imbribus incepit, qui hac tempeſtate rorare ſolent. Tempus poſtea ſudum factum eſt, & permanſit ad 12 usque, licet venti undequaque erraverint. Die 11 therm. indicavit +21, 9. Diebus 13 & 14 calorem temperavit modica pluvia, coelo interim procelloſo. Turbines iterum exorti diebus 20 & 23. Hac poſtrema liquor therm. ad +19, 8 attollitur, & die 24 ad +15, 2 ſuſtinetur. Licet altiſſimi non ſint praedicti gradus therm., aeſtus tamen permoleſtus erat, ultima praeſertim die. Tunc tempus convertitur ad pluviam, quae reliquo menſe perſeverat. Interea ventus ſat vehemens modo SW, modo SSW, modo WSW. Ante 24 venti continuo huc & illuc vagati erant. Aquae pluviales, hoc menſe, fuerunt altitudinis 4 poll. 4 lin. 9 dec.

Initia Junii pariter pluviae ventisque vehementibus, SW nempe & WNW, fuere obnoxia. Vehemens flavit die 7 a parte NNW. Die 9 ſudum factum eſt coelum, & tale permanſit ad 16 usque. Quo quidem temporis ſpatio ventus fere ſemper a puncto NO flavit, isque vehementiſſimus fuit die 13. Pluere coepit 16, & usque ad finem menſis, tribus exceptis diebus, imber quotidie decidit, tonitru interdum reſonante. Fuit ſemper ventus a parte SW, ſaepe violentus. Aquarum copia per menſem delapſa fuit altitudinis 2 poll. 4 lin. $6\frac{1}{2}$ dec.

Menſe Julio ineunte ſudum fuit coelum; duobus autem primis diebus elapſis glomerantur nubes & in imbrem reſolvuntur. Hoc menſe decurrente imbres fere continui vix quibusdam breviſſimis intermittuntur temporibus. Interea colliguntur nimbi, & coelum plures per dies immutant. Ventus vix a puncto SW per aliquot momenta deflectit, & in illud punctum brevi relabitur, & id per pauciſſimos dies, qui utcumque ſereni vocari poſſent.

IV.

Nullus fuit in autumno morbus epidemicus. Si fluxio catharralis, cujus ſedes erant trachaea arteria & bronchia, excipiatur. Nec contumax, nec periculoſa, & raro febre comitata obſervabatur. Per omnem vero Galliam graſſabatur, & omnes civium ordines ea laborarunt. Nomine Grippe, quod in Gallia, dum hic multis jam ab annis regnavit, accepit, iterum fuit appellatus morbus ille. Plures ſolum febres intermittentes, remittentes obſervatae ſunt. Tertianae, duplices-tertianae vulgatiores viſae ſunt. Rariores fuerunt quartanae. Primae, etiamſi vulgo bilioſae, methodo convenienti facile cedebant. Neglectae tamen, vel male curatae malum ſignum offerebant, & in febres putridas evadebant; in urbe quam in rure frequentiores exiſtimatae ſunt. Rubeola morbus praevalens fuit in cuncta provincia. Adulti non hujus immuniores fuerunt, quam adoleſcentes & pueri; benigna vero erat, raroque lethifera. Mortes in autumno non fuerunt generaliter crebrae.

In appulſu frigorum febres decreverunt. Catharrales & bilioſae deſignatae ſunt; putridae raro obſervatae fuerunt.

Eruptioni rubeolae ſummum frigus multum favere viſum eſt. In hiemis ſerie fuit vulgatior rubeola; benigna quoque in progreſſu viſa eſt, ruribus exceptis, in quibus quandoque lividae maculae & purpureae connexae fuerunt. In hieme vero longiores fuerunt effectus, difficiliusque ſanabiles, praeſertim in infantibus. Raro tamen fuit capitalis. Inter ſenes fuit quaedam mors repentina, quaedam etiam creberrima inter morboſos & cacochysmos utriusque ſexus; & inter cauſſas utrarumque mortium primae indicantur apoplexiae, anginae, peripneumoniae, catharrales, gangrena vitiatae. Valentiſſima adjumenta in ſinum pauperum profuſa a morbis plebem defenderunt, quos penuria & triſtitia temporum neceſſario concitaſſent. In noſocomiis tamen fuerunt quaedam febres malignae, putridae & bilioſae, quae fere omnes morbo tentatos morte mulctaverunt. Sanitas in frigore generatim viguit; & plerique famem optimam habuere.

Paulo poſt glaciei ac nivium ſolutionem catharri, & peripneumoniae catharrales permultos ſenes, aſthmaticos & phthiſicos in urbe trucidarunt. Iidem morbi in rure imperium tenuerunt; pluraque praeterea nota fuerunt eryſipelata. Mors tamen numquam fuit crebra inter virentes & valentes. Fuit rara mors repentina. Cadaverum inviſiones, inflammationes gangrena maculatas, ſignaque ſuppurationis in viſceribus, atque in cavitatibus ſuffuſa ſera detexerunt; rubeolae imperium primo vere ſenſibiliter remiſit, brevique deſiit. Iſtius morbi breviores fuerunt effectus, minusque moleſti quam hieme regnante. Febres intermittentes rarae fuerunt & fugaces. Quaedam eryſipelata, oculorum epiphorae, anginaeque catharrales ſimplices, quaedam ſigna obſervationis praebuerunt. Ver & aeſtatis initium fere nullum morbum deſignaverunt, nullusque fuit praevalens. In rure ſolum nota fuit tuſſis ferina, nobis Gallis dicta *Coqueluche*, ſaepe febri verminoſae connexa. In plerisque huic morbo ſufficiens officium praeſtitit natura.

V.

Vi frigoris laborare non viſi ſunt quadrupedes. Aliquot equi diu noctuque in pratis remanſerunt, nec quidquam inde perpeſſi ſunt mali. Inter animantia venatica ipſi lepores, tam graviter non laboraverunt ac volucres.

Aves regionum ſeptentrionalium indigenae in noſtras advolarunt. Cygni huc affluxerunt, plurimique fuerunt necati. Olides, quae in pictonum campis ſat frequentes videntur, & in noſtra provincia fere numquam, hac hieme apud nos ſat magno numero viſae ſunt. Perdices plurimum paſſae ſunt ex frigore, ipſa manu comprehendebantur. Alaudae & caeterae iſtius modi aves pariter facillime capiebantur. Magna pars earum fame & frigore perierunt.

Magna piſcium copia interiit in foſſis aquae tum dulcis tum ſalſae, in paludibus ſalariis & ubicumque ſtagnans erat aqua. In ipſo littore maris perierunt piſces glacie correpti.

Vix ullum remanſit oſtreum ex innumeris, quae ſervabantur in noſtris & Santonum aggeribus. Quae inhaerebant molibus quibusdam in ipſo mari, quas aeſtus numquam omnino deſerit, perierunt ad quandam altitudinem.

Mutili, iique ipſi quos unda maris decedens in arido relinquit, praeſertim qui prope pagum, vulgo dictum *charon*, in ligneis aggeribus multa arte ſervantur *), vi frigoris reſtiterunt, aut ſaltem pauciſſimi periere. Ii vero, qui in littore a quocumque colliguntur, quorum eſt major copia, & qui minori praetio venundantur, multum profuere.

Cochleae marinae, minimae ſpeciei & ore rotundo, quibus abundant littora noſtra, quaeque apud nos *Guignettes* appellantur, frigori ſuperſtites fuerunt. Aliae cochleae marinae fere omnes interierunt. Quod contigit etiam pectunculis & peloridibus. Hiatulae, ſeu tellinae, dictae *lavignon* vel *lavagnon*, parum laborarunt; idem dicendum de conchyliis, quae apud nos dicuntur *Patagaux*.

Carabi caeterique cruſta induti maximum ex frigore paſſi ſunt malum. Parvae ſquillae marinae, quas vocamus *chevretes*, quas Santones & Burdigalenſes dicunt *Santé*, alii tandem *Crevetes* vel *Salicoques*, quae maxime abundant in littoribus noſtris, a primis verni temporis diebus, & per totam aeſtatem, hoc anno rariſſimae fuerunt.

Cochleae terreſtres, diverſae ſpeciei, fere omnes perierunt, dum limax nudus longe minus paſſus eſt mali.

Lauri, ficus, mali granatae, gelſiminia, roſaria odorem moſchi ſpirantia, quae omnia aperto aëre coluntur, a gelu necata fuerunt. Succiſa ſunt a parte radicibus proxima.. Aliquot repullulant. Arbuti, quae in hac provincia ſunt admodum rarae, eamdem expertae ſunt vicem. Tamarindi, quae maris vicinio gaudent, omnes fere geniſtae, quae in hortis excoluntur, glacie perierunt. Geniſtae ſpinis hirſutae, quae non niſi longe ab oppido reperiuntur,

*) Vide de Mutilorum foſſis, appellatis *Bouchot*, academiae Rupellenſis tomum ſecundum.

tur, & quae undique occurrunt in Santonenſi provincia, & agro pictonico, aruerunt, quemadmodum geniſtae, ex quibus conficiuntur ſcopae, & myricae. Major autem horum arbuſtorum pars repullulat.

Hic ſermonem non habemus de arboribus, arbuſtis & plantis, quae in cellis fere omnes perierunt, quaeque majori cura ſervari potuiſſent.

Nuces, quibusdam in locis, detrimentum acceperunt. Aliquot ramuſculi quernei vel ormei non omnino indemnes fuiſſe videntur. Saliunca partim gelu periit.

Foeniculum in agris noſtris frequentiſſimum gelu etiam periit. In hortis cinarae fere omnes necatae ſunt; quae vero ſervatae ſunt, maximis debentur curis. Quibusdam in hortis aliquot repullularunt; in aliis vero ab ipſis radicibus aruerunt. Thymum partim interiit. Inter olera, ſpinacia prae caeteris melius fuere ſervata.

De vitibus maxima fuit ſollicitudo, ſed minimum aut nullum paſſae ſunt malum. Aliae provinciae, praeſertim Eudegavenſis, non tam proſpera utuntur fortuna.

Ubi primum ſolutae ſunt glacies, ſegetes integrae videbantur; ſi tantum excipias hordea & avenas, pauciſſimis adhuc in locis. Fallaces iſtae ſpecies eo ſenſu nocuere, quod pauci agricolae neceſſarium duxerunt, jam tum vertere terram, ipſique nova mandare ſemina. Tardius id perfecerunt, quod tamen maximae fuit utilitatis. Nunc vero (1 Aug.) facta eſt fere omnis perceptio hordeorum, quae anguſtius provenerunt; jam colligi ceperunt frumenta.

Generatim loquendo, frumenta maturius ſata, quae ante vim frigoris firmiora erant, ſat integra remanſerunt. Quae a breviſſimo tempore orta erant, maxime perpeſſa ſunt. Quae modo agris commiſſa fuerant, ſervata ſunt, & elapſo frigoris tempore pullularunt. Quae poſt ſolutionem glaciei ſeminata, ſunt pulcherrima. Temperies, quae frigora ſubſecuta eſt, opportuna fuit. Calami eo numero creverunt, ut denſiores ſint etiam in agris, in quibus rariſſimi erant; ſed frugum perceptio ſeriſſima eſt.

Frumenta vel potius hordea cujusdam ſpeciei (vulgari ſermone dicta *Baillarges*), cum poſt frigora fuerint ſeminata, amplam dant granorum copiam. Idem dicendum de avenis eodem tempore ſatis; quae ante hiemem mandatae fuerant terrae, penitus perierunt, quod contigit & linis.

Vinum glacie concrevit in multis cellariis, nec tamen deterius factum eſt. Timendum fuit tantum, ne dolia ruptis vinculis diſſolverentur. Poma, mala terreſtria, & paſtinacae hortenſes apud plurimos glacie ſunt vitiatae.

NB. Hanc frigoris hiemalis hiſtoriam imperfectam credidi, niſi adderem ſtatum barometri ſequentem ex menſe Januario 1789.

OBSERVATIONES UNIVERSALES.

Conditio meteorologica hujuſce anni cognoſcitur per ſeriem obſervationum in tabulis, ac tabellas additas, phaenomena vero peculiaria habentur in annotationibus. Pauca ergo monenda ſuperſunt.

Hiems, in hac ditione Veneta, atque adeo in Italia univerſa, fuit mitis, & auſtralis, pluvia ſcilicet ac tepida, ſine glacie ac nive. Ver atque autumnus, praeter ingenium, ad ſiccitatem inclinarunt. Aeſtas vero ſupra modum calida evaſit. Aeſtus non ſolum magnus, ſed longus obtinuit. Thermometrum enim menſe Julio, plures dies circa gradus 26 aſſurgebat, & medius menſis calor gradus fere duos communem exceſſit.

Succeſſit proxima hiems 1789, quae Europam totam afflixit, ſed jam magna vi ingreſſa erat ſub finem Decembris: die namque 30 gradus frigoris indicatur $12\frac{1}{2}$.

Conditio agriculturae fuit parum felix. Tritico nocuit humiditas hiemis cum ſiccitate veris; frugibus autumnalibus aeſtas calida ac ſicca. Fructus aſperum ſaporem tulerunt; humore quippe deficiente nec bona concoctio fieri poteſt, & nimius calor cauſticitatem potius progignit. Vini tantum abundantia fuit, atque ex omnibus ſpeciebus unica haec vili pretio adhuc venit. De infelicitate anni ſequentis dicemus, cum elapſus fuerit, ſi Deus vitam ac valetudinem dabit.

OBSERVATIONES PHAENOMENORUM QUORUNDAM FACTAE IN INSULIS AFRICANIS FRANCIAE ET BORBONII *)

A VIRO CLARISSIMO BRUNEL,

REGI GALLIAE A CONSILIIS, ACADEMIAE BLITERRENSIS SCIENTIARUM ET BONARUM ARTIUM SOCIO ORDINARIO &c.

PHAENOMENA terrifica maxime & horrenda ſunt vulcanorum eruptiones & terrae motus, quorum mutuus conſenſus, cauſſae & effectus a phyſicis explicari ſolent. Terras maritimas iis praecipue obnoxias eſſe propter copiam ingentem corporum inflammabilium, a mari ſuffectorum, cujusmodi ſulphur & bitumen ſunt, res ſatis nota eſt.

Vulcanus inſulae Borbonii fere vertici montis inſidet truncati & laxati, atque a mari leucam majorem diſtantis, cujus baſis modice inclinata ſolo exuſto ſuſtinetur. Quamvis materies, quam ſinu ſuo condit, perpetuo ebulliat, non adeo tamen ſemper turgeſcit, ut per craterem evadat. Quando fit eruptio, lava **) liquida inſtar fluminis ignei, altas undas agentis, per declivitatem montis decurrere conſpicitur. Lux, quam terra marique late diffundit, ſplendorem lunae nitide lucentis imitatur. Imo primos Europaeos, ad ea maris loca jactatos, naturali hac Pharo ad inſulam adductos fuiſſe, conſtans apud incolas & magni ponderis eſt traditio.

Res ſingularis & memoratu digna, quae hunc vulcanum a ceteris notis diſtinguit, eſt eruptionum ejus frequentia, quin terrae tremorem efficiat. Hinc fit etiam, ut incolarum ſecuritas hac vicinitate, alio quovis loco tam periculoſa, haud turbetur. Fortaſſe non abs re eſt animadvertere adhuc, aquas ex hoc vulcano numquam ſalire, nec thermas in tota inſula reperiri.

Menſe Junio anni 1787 eruptio hujus vulcani e majoribus una obſervata eſt. Vertex montis vaporibus nigricantibus iisque denſis, turbineo motu aſcendentibus, coopertus apparebat. Die ejusdem menſis 24, novendio poſtquam lava ejecta fuerat, haec in mare influebat. Latitudo ejus locis quibusdam 80, aliis 40 hexapedum erat. Menſe poſt materies, copioſe

*) Ex ſermone gallico traductae.

**) Permittat benevolus lector uſum hujus vocis breviſſimae, cuivis ſatis clarae, quamvis non latinae.

copioſe ſemper manans, aggerem in mari excitarat, 60 circiter hexapedes latum, pedes 15 aut 16 craſſum. Fumabat aqua omni parte ad diſtantiam amplius 30 hexapedum ab eo loco, in quem lava incidit. Die undecimo, poſteaquam lava mari ſe junxerat, haec cruſta ſolida obducta fuit, per quam ad 15 paſſuum intervallum ab ejus lapſus origine remeare licuit, hic vero calor ita invaleſcens, ut ferri amplius haud poſſet, tragicum Plinii finem in memoriam reduxit obſervatori, ad res alias indagandas praeter haec illecto. Ceterum credere ſe torrenti lavae ſine temeritate poteſt is, qui effectum ejus curatius perquirere voluerit. In locis planis promte frigeſcit materies in externa ſuperficie ſua, duritiem vitri craſſi induente, interea dum aeſtuans in fundo curſum ſuum libere proſequi per rimas cernitur. Aſt lava ſubinde offendens obſtacula in ſe ipſam refluit, cruſtamque diffractam nova materie inducit. Unde in locis declivibus & ſinuoſis aegre lava ſoliditatis durabilis gradum ſufficientem nanciſcitur, id quod attente conſiderandum eſt. Calendis Auguſti fluere lava ceſſavit, ſed fumans adhuc, & in ima alvei ſui parte valde candens erat.

Inſula Franciae terra exuſta & penitus everſa habetur. Reperire ibi eſt magnam vim ſpecuum, cataractarum, praecipitiorum, locorum velut fornicatorum, cavernas ſono prodentium, fodinarum ferri, lapidum cum in calcem, tum in vitrum converſorum, ſabuli torrefacti, pyritarum, quae omnia totidem veſtigia ſunt veterum vulcanorum. Vel altiſſimi hujus inſulae montes ne ad 500 quidem hexapedes aſſurgunt, dum in Borbonii inſula montes exiſtunt ultra 1500 hexapedes elati.

Hae duae inſulae, non amplius 35 leucas ab invicem diſtantes, olim haud dubie cohaerebant. Ingenti naturae contentione altera ab altera poſt haec avulſa fuit. Omnia faciunt fidem, ambas adhuc inter ſe & ſub mari jungi & communicare per porticus ſubterraneas, ad commune centrum quoddam concurrentes. Terrae motus, quo agitata inſula Franciae die 4 Auguſti anni 1786 fuit, confirmare hanc opionem videtur.

Hoc ipſo die, mane hora 6, minutis 35, malacia derepente excepit ventum validum, qui 4 dierum ſpatio ex O & OSO ſpiraverat. In parte SO murmur audiebatur obſcurum, terminatum ſubito fragore, qualem edere tormentum bellicum explosum ſolet; & eodem temporis momento duo exiſtebant terrae concuſſus admodum fortes, quorum alter verticalis, alter horizontalis erat. Nullam prorſus atmoſphaerae aëreae mutationem barometrum indicabat. Poſt horae quadrantem rediit ventus OSO, usque ad horam 11 veſpertinam diei poſteri continuans. Inſolentem hunc eventum malum nullum in tota inſula Franciae inſecutum eſt, multo vero majorem lavae copiam a vulcano inſulae Borbonii tunc ejectam eſſe, quam diebus praecedentibus, adlata inde teſtimonia comprobarunt.

Credibile itaque eſt, materiem, in cavernis inſulae Franciae latentem, poſt ebullitionem ignem concepiſſe, exitum poſtea molitam, ſed obſtaculis impeditam, excitaſſe terrae motum, vim dein in omnem partem exſerentem per porticus ſubterraneas in inſulam Borbonii pene-

traſſe, ubi cum minus renixus offenderet, per vulcanum ſibi feciſſe viam, hinc tremorem terrae inſenſibilem in hac inſula extitiſſe.

Obſervationes meteorologicae ſub tempus hujus terrae motus inſtitutae in Portu S. Ludovici inſulae Franciae, ſequentia conſectaria dedere. Situs autem hic portus eſt in ſolo, 7 hexapedes ſuper maris ſuperficiem elato, ſub latitudine meridionali 20°, 9', 45", & ſub longitudine orientali 55°, 8'.

Die 3 pluvia cecidit, 2/3 lineae aequans, quinque reliquis diebus nulla.

Haec phaenomena minus inquietant incolas inſularum quam venti procelloſi, terrorem iis & vaſtitatem ſaepe importantes. Ventus hujus generis, quo inſula Franciae anno 1773, nocte dies 9 & 10 Aprilis intercedente, quaſſa fuit, imaginem triſtiſſimam praebet. Furere coepit circa horam 9 veſpertinam oriente luna. Vim maximam exſeruit ab hora 11 ad 1 nocturnam. Horrificus erat & mugitus venti & tonitruum fragor. Ignes ac phoſphori, qui coelum terramque incendiſſe videbantur, noctis tam immanis horrorem adhuc augebant. Formido non prius quam hora 5 matutina ceſſavit. At quam terribile ſpectaculum illuceſcente die! Aedes amplius trecentae in urbe Portus Ludovicii quatefactae, omnia tecta ablata, templum princeps deſtructum, infortunati alii ruinis oppreſſi, alii contuſi ac mutilati magnis clamoribus implorantes opem, quae ferri non niſi ſero aut nullatenus potuit; clavis, fragmentis lignorum, ſcandulis conſtratae plateae; naves omnes, triginta duae numero, in altum jactae & magno damno affectae; harum complures ſubverſae, nihil ut ex iis praeter imum pluteum videre eſſet; alia plane disparuit, nullo aut partium ſuarum fragmine aut ſortis ſuae indicio relicto; fluctuantia inter navium reliquias cadavera, operarii nautici adverſus fluctus iratos luctuantes, ripam irrito conatu petentes; ubique nil niſi luctus, niſi trepidatio & dolor.

Cala-

Calamitas in campis non minus foeda. Milium indicum, frutices panarii, oryza, ſegetes ruptae & diſperſae, coffeae, xyla, cannae ſacchareae, nuces aromaticae, caryophylli, diffracta & extirpata; annoſae arbores evulſae aut vi turbinum contortae; opificia ſtrata, herbae exſiccatae & flaccidae, non ſecus ac ſi aduſtae eſſent.

In tractu inſulae aliquo mare tempeſtate agitatum, terminos ſuos ordinarios egreſſum, ultra pedes 40 elatum, habitatores in loca edita abegit, ne aquis in aedibus ſuis haurirentur. In campos ſilvasque vicinas refuſum piſces omnis generis, cum inde recederet, reliquit. Adverſus hic caſus eam annonae caritatem invexit, ut per ipſos tres menſes libra panis 18 ſolidis veniret.

Alius ventus procelloſus ſaeviit in inſula Franciae die 14 Decembris anni 1786. Valde intumuerat mare tempore matutino, vento ex O per impetus flante. Hora 7 matutina coelum obſcurabatur, nubesque denſae ſenſim apparebant, turbinibus dein diviſae. Barometrum erat 27, 10, 5, thermometrum 20, 5.

Hora matutina 9 decidebat pluvia; ventorum vis paulum invaleſcebat. Hi circa meridiem ad plagam ONO tranſibant, impetus eorum fortes, turbines, pluvia continua, barometrum perpetuo deſcendens.

Hora 2 pomeridiana ſtatus barometri erat 27, 9, 3; tempeſtas hora $4\frac{1}{2}$ indubia, ventus magnopere gliſcens, barometrum pergens deſcendere, mare immane quantum agitatum.

Barometrum erat 27, 8, 3 h. 6 veſpertina, 27, 7, 6 hora 8, media nocte 26, 11, 9; thermometrum iisdem horis 21, 0; 19, 5; 19, 0; ventus ſemper violentus, & pluvia non interrupta.

Die 15, h. $2\frac{1}{2}$ matutina, ventus vires exſerebat maximas, barometrum erat 26, 9, 3, indicia praebens aſcenſus, remittebat exin parum ventus, impetus nonnulli ex N, ventus ad NW migrabat.

Hora $\frac{1}{3}$ matutina barometrum exhibebat 27, 0, 0; fulgura & tonitrus in SW; in plaga inſulae, quae *Molla* dicitur, meteorum apparebat globum luminoſum referens, lunae medium magnitudine aequantem, & eadem fere via cum vento devectum. Non niſi temporis momento videbatur.

Hora 5 matutina barometrum 27, 10, 5, thermometrum 21, 0; redibat malacia. Serenabatur aliquantum coelum hora 7, ventus ad W declinabat. Pluvia ceſſabat hora 8, celer barometri aſcenſus, vento ſubfrigido ex W ſpirante. Sub meridiem aër frigidiuſculus ex SW allapſus, qui & reliqua diei parte continuabat. Pluviae lineae $73\frac{3}{4}$ intra horas 24 deciderunt.
