PRAEFATIO.

QUANTUM adlaboret ſocietas meteorologica Electoralis, ut deſtinata pro viribus perficiat, teſtis eſt tomus hic quintus, tam ſegetum copia, quam fructuum ubertate conſpicuus.

Ad obſervationes ordinarias accedunt hoc anno primum Cantabrigienſes, inſtrumentis Electoralibus factae, quibus autor accuratam deſcriptionem ſitus urbis Cantabrigiae ac circumjectae regionis praemiſit. His ipſis obſervationibus adjecta ſunt tum capita conſectaria obſervationum,

num, anno 1784 in eadem urbe a cl. professore EDUARDO WIGGLESWORTH institutarum, tum brevis enarratio morborum, qui utroque hoc anno Cantabrigiae dominati sunt, celeb. medico RAND autore.

E numero observationum extraordinariarum sunt primo observationes unius mensis lunaris synodici, dein barometrographicae, illae Pragae a cl. fodali nostro STRNAD, hae Manheimii a secretario societatis institutae. Priores a die 1 Julii ad 6 Augusti diu noctuque singulis horis factae sunt, barometro, thermometro, hygrometro, coeli facie ac meteoris notatis; posteriores statum barometri a die 21 Maji ad annum finem singulis quaternis minutis signatum exhibent. Institutae hae sunt instrumento a cl. CHANGEUX invento, & in Musaeo physico Electorali Manheimensi collocato, cujus descriptio, figuris aeneis illustrata, appendice hujus tomi a pagina 16 ad 18 continetur.

Quamquam phaenomena, quae in observationibus occurrunt, in universum omnia magni sint momenti, inter haec tamen multa rariora & notatu dignissima, cum in consuetis observationum tabulis, tum in adjectis

adjectis peculiaribus annotationibus, reperiuntur. Huc spectat tuba aquatica, Spidbergae Norvegiae visa; aestus maritimus ingens, Rupellae observatus; parhelia insolita spectata Bruxellis bina, quina Moscuae; frigus saevum & acerbum, quod mensis Martii exordium per omnem late Europam perstrinxit &c.

Perampla & uberia confectaria sunt, ex singulorum locorum observationibus deducta. Horum pars plurima ab ipsis observationum autoribus, cetera a cl. socio nostro KOENIG, Monachii nunc degente, confecta sunt. Cum multa hucusque fontibus suis proxime subjuncta per opus sparsa extiterint, universa hoc anno, si pauca exceperis, ad appendicem rejecimus.

Praeter particularia haec confectaria eadem appendix etiam universalia exhibet, ab eodem cl. KOENIG composita, in quibus omnium stationum observationes inter se conferuntur. Haec autor annis proximis variis articulis augebit.

Duo

Duo adhuc insignia sunt capita, ex observationibus derivata, quae hoc volumen sistit. Alterum est tabula exspectationis vitae, inter Americae borealis, variorumque Europae locorum incolas comparativa, quam nominatus supra cl. EDUARDUS WIGGLESWORTH condidit, alterum diatribe est ab HEMMERO scripta, qua hic ostendit, barometrum sub solis per meridianum transitum, seu diurnum seu nocturnum, semper vel reapse descendere, vel nisum ad descensum exserere, ac proinde atmosphaerae pressionem vi solis attrahente revera moderari.

Memorandum hoc loco est opus praestans & utilissimum, quod cl. socius noster GUARINUS SCHLÖGEL, canonicus Rotenbuchensis, elucubravit. Continet hoc tabulas reductionum duodenas, quibus status barometrici quicunque, partibus quibuslibet, decimalibus an aliis expressi, mensura seu Parisina seu Londinensi exhibiti, & comite thermometro cujusvis generis observati, ab effectu caloris facillime corrigantur seu liberentur. Cum multo majus sit hoc opus, quam ut Ephemeridibus nostris inseri potuisset (alphabetum enim integrum complectetur), e paratim id autor Monachii imprimendum curavit. Exemplar tamen singulis

singulis voluminibus, quae colendissimis observatoribus nostris mittimus, addidissemus, si jam prelo totum excessisset.

Regularum, quas in hoc opere autor tradidit, usum ampliſſimum posthac in observationibus forsan faciet. Suas interim observationes barometricas cl. PLANERUS ad calorem 16½ gr. scalae Reaumurianae hoc anno reduxit.

Quam multiplicem de reliquo & copiosam materiem, adhuc intactam, naturae scrutatoribus hae observationes omni parte praebeant, quisquis eas attentius inspexerit, facile intelliget. Exemplum unicum, multorum loco, proferemus. Quam diversa acuum, quoad vim, longitudinem, formam, cetera, inter se omnino parium, diversis in locis declinatio! Fuit haec per annum 1785

Eam Florentiae fuiſſe 16°, 56′, quae ad Romanam proxime accedit, ſimilemque per totam fere Italiam obtinuiſſe, cl. TOALDO in appendice pag. 80 teſtatur. His omnibus longe majorem in Groenlandia eſſe Hafnia accepimus, quod ex obſervationibus ejus ſtationis, quae nunc in hac terra nobis eſt, anno proximo apparebit.

His adde mirum illud phaenomenum, quod acus aliquibus in locis, veluti Metelloburgi, Peiſſenbergae, Pragae, inſignes ſubierit variationes, in aliis vero, uti Budae, Maſſiliae, Romae &c., exiguas aut fere nullas, quod & annis praeteritis accidere ſolitum fuit. Quo clarius hujus

hujus rei diſcrimen pateat, ſeriem ſuperiorum urbium denuo ſubjicimus, addita ſingulis, quae toto anno extitit, maxima declinationis variatione.

Maſſiliae certe non tantum acum Electoralem, ſed aliam quamvis, nullam fere variationem in declinatione pati, autor eſt cl. ſodalis noſter SILVABELLE. „ Variationes, inquit, quotidianae acus magneticae „ Maſſiliae nullae obſervantur. Silentio præterimus phaenomenum aliud non minus mirandum, quod locis compluribus declinatio ſub meridiem, quam mane & veſpere, plerumque major exiſtat, quod quidem Manheimii, ut de aliis locis nihil dicamus, ita commune eſt, toto ut anno pauciſſimae exceptiones locum habeant, ſicut obſervationes hujus urbis palam faciunt, & earum autor hactenus paſſim annotavit.

In edendo hoc volumine magnam pro more operam dedimus, ut vitiis typographicis omnia, quoad ejus fieri poteſt, purgata comparerent. Dum vero nihilominus aliqua irrepſiſſe fatemur, lectores ſimul monendos eſſe duximus, loca nonnulla, quae non ſatis aut inter ſe, aut cum ipſa natura cohaerere multis videbuntur, in ipſis obſervatorum manuſcriptis ita, uti hic prodeunt, reperiri.

Quae

*) Ephem. meteorol. Palat. tom. III, pag. 498.

Quae obſervationes hoc anno deſiderantur, earum aliae juſto ſerius nobis adlatae ſunt, aliae morte obſervatoris interciderunt.

Ne aut volumina, aut haec edentium labores, inutiliter augeantur, obſervatores omnes vehementer oratos volumus, ut ne longioribus verbis in annotationibus ſpecialibus dicant, quod ſignis a nobis receptis brevius exprimi, & in proprias tabularum columnas referri poteſt.

Iſtud ſimul precamur omnes, ut quae volumina ſingulis, velut debitum laboribus eorum tributum, mittere quotannis conſuevimus, de his acceptis certiores nos quamprimum faciant, ut, ſiqua forte in via interciderint haeſerintve, monere eos, quibus illa commiſimus, in tempore poſſimus.

In veteribus ſocietatis ſtationibus ab anno ſuperiore in hunc nulla mutatio facta eſt, praeterquam in Tegernſeenſi, Peiſſenbergenſi, Moſcuana & Budenſi. In prima cl. obſervatori noſtro P. DONAUBAUER

a ſuperioribus ſubſtitutus eſt doctiſſ. P. MAURUS MAGOLD. In ſecunda priſtinus ſocietatis obſervator GUARINUS SCHLÖGEL, munere docendae matheſis in abbatia Rotenbuchenſi aliquamdiu functus, ad obſervandum rediit, & cum cl. SCHWAIGERI opera ſuam conjunxit. In tertia clariſſimum ENGEL, doctorem & aſſeſſorem, academiae ſcientiarum Petropolitanae correſpondentem, mors abſtulit, cujus loco vir illuſtris STRITTER, conſiliarius aulicus & eques, obſervandi partes ſuſcepit. In quarta meritiſſimus ſocius noſter FRANCISCUS WEIS, AA. LL. & philoſophiae doctor, ac ſpeculae aſtronomicae Budenſis praefectus, e vita quoque migravit. Cum regia ſcientiarum univerſitas Peſthana viro huic celeberrimo XIV Calendas Martias an. MDCCLXXXV ritu ſolenni parentaret, deſignatus orator funebris, cl. SZERDAHELY, archigymnaſii Regii Budenſis director, defuncti biographiam ac juſtiſſimas laudes, quas hic referre longum foret, ſequenti epitaphio concluſit.

Tabulas has barometricas intuenti ſequentia palam fient.

TAB. I.

1) Maxima barometri altitudo = 28, 4, 3 hoc anno menſe Aprili extitit, minima = 26, 11, 3 menſe Februario.
2) Altius hoc anno barometrum aſcendit quam annis 1781, 1783, 1784, minus alte tamen quam anno 1782
3) Sub plerorumque menſium altitudinibus barometricis maximis nullae vel rarae in coelo nubes erant, frequentes ſub altitudinibus minimis.
4) Magis, uti alias, hyberno quam aeſtivo tempore barometrum variavit.

TAB. II.

1) Summa variationum totius anni = 714, 6 minor eſt quam tribus annis praecedentibus; erat enim an. 1782 = 839, 2, an. 1783 = 718, 2, an. 1784 = 736, 1.
2) Variationes hyemales aeſtivas 106, 0 excedunt.
3) Maximae barometri variationes menſe Novembri, minimae in Junio extitere.
4) Differentia inter variationes duorum horum menſium = 39, 0.
5) Auctae ſenſim variationes in Januario & Februario, diminutae quatuor menſibus ſubſequentibus, auctae menſe Julio, aequales in Junio, inde auctae denuo ad Novembrem inclusive, Decembri menſe iterum diminutae.
6) Inter nocturnas diurnasque variationes, habita temporis ratione, nulla eſt proportio.

TAB. III.

Altitudo media barometri = 27, 9, 9 eadem eſt ac an. 1781, major autem quam annis 1782, 1783 & 1784. Media ex hoc quinquennio quaeſita = 27, 9, 6 invenitur.

TAB. IV.

Regula, annis ſuperioribus ſtabilita, eadem recurrit, altitudinem barometri circa meridiem, quam mane & veſpere, minorem exiſtere.

TAB. V.

Dicta jam regula tenet, licet calor barometri meridianus matutino & veſpertino ſit major.

TAB. VI & VII.

Diſſenſus eſt inter hujus & ſuperiorum annorum altitudines barometricas, ad lunae phaſes relatas. Conſtans tamen per totum hoc quinquennium veritas, ſpectata ubique utraque Tabula VI & VII, haec eſt, barometrum tempore plenilunii quam primae & ultimae

mae sive praecedentis & subsequentis quadraturae, altius existere. Exceptionem unicam, ratione primae quadraturae, facit anno 1782 tabula VI, ubi tamen VII cum reliquis consentit.

TAB. VIII.

Major hoc anno barometri altitudo perigaeorum lunae quam apogaeorum tempore.

TAB. IX.

Par altitudo barometri (= 27, 10, 8) in lunistitiis borealibus & aequinoctiis lunae ascendentibus, par item (= 27, 9, 0) in lunistitiis australibus & aequinoctiis lunae descendentibus; at in illis lunae punctis quam in his notabiliter major.

Ex tabulis thermometricis haec elucent.

TAB. I.

1) Calor ut maximus sic minimus nullo fere mense in ipsum aliquod punctum lunare, sed vel ante vel post incidit.

2) Calor maximus Auguſto menſe, frigus maximum menſe Martio extitit. Poſterius hoc plane inſolitum eſt.
3) Calor maximus = 23, 6 non ita parvus toto quadriennio ſuperiore fuit.
4) Variatio thermometri maxima = 35, 9 minor eſt quam toto triennio ſuperiore.
5) Menſibus aeſtivis quam hyemalibus major, uti aſſolet, caloris variatio eſt.

TAB. II.

Major eſt pro more altitudo barometri per frigidas quam per calidas anni tempeſtates.

TAB. III.

1) Per omnes anni menſes major matutino calor eſt veſpertino.
2) Menſis calidiſſimus, uti alias, Julius.
3) Minor hujus anni calor eſt quam anni cujusvis per totum quadriennium ſuperius.

TAB. IV.

1) Calor ſolaris maximus = 29, 0 in Septembrem, non in Auguſtum, uti maximus umbratilis, incidit.
2) Differentia inter utrumque hunc calorem maximus = 5, 4.

CONSECTARIA OBSERVATIONUM BAROMETROGRAPHICARUM.

Antequam ea, quae ex his obſervationibus a pagina 46 ad 53 ſupra poſitis conſequuntur, ſummatim hic ſiſtam, barometrographi, quo utor, ſuccinctam deſcriptionem, ibidem promiſſam, trado. Praeſtans inſtrumentum curis & benevolentia cum autoris ipſius, tum phyſici celeberrimi, mihique amiciſſimi Delor, Lutetia Pariſiorum accepi. Adjunctum ili barometrum hic conficiendum, tabulam aeneam in dies tantum diviſam in horas quoque dividendam, atque alia nonnulla mutanda curavi.

Pars inſtrumenti primaria diſcus eſt aurichalceus, qui horologii penduli motu circumagitur. Septem dierum Spatio converſionem integram conficit, prominente horologii rotu peculiari incitatus, quem in finem peripheriam dentatam habet. Ejus medium tabula horaria occupat.

Huic diſco tabula aere excuſa imponitur, cochleisque affigitur. Haec diſtincta eſt tum 36 circulis parallelis, ex ejus centro deſcriptis, qui tres pollices pariſinos, in ſuas lineas partitos, & numeris 27, 28, 29 inſignitos exhibent, tum lineis divergentibus 168, ex eodem centro ad circumferentiam ductis, quae 7 dies, ſingulos in bis 12 horas diviſos notant. Nomina dierum hebdomadis circulo intimo, numeri horarum circulo extremo, cu lineae divergentes inſiſtunt, adſcripti ſunt. Quando tabula in diſco firmatur, in coronae quam geometrae vocant, formam exſcinditur, ut tabula horaria libera appareat. Qu planius firmiusque diſco apprimatur, margo coronae uterque, minor ac major, ſive peripheria utraque, interior ac exterior, laminis tegitur aurichalceis circularibus, in orbem continentem poſitis, per quos una & diſcum cochleae trajiciuntur.

Barometrum inſtrumenti oppido capax, &, veluti res poſtulat, inverſum eſt. Sphaera ſuperior diametrum $2\frac{1}{2}$ pollicum, ſphaera inferior 2 pollicum, tubi apertura $\frac{1}{4}$ pollici habet.

Mercurio barometri tenuis innatat laguncula vitrea, fundo plano, & collo oblongo ex brachio tubi breviore aperto prominente inſtructa, quae *natator* nominari poteſt.

Collo natatoris inſertus eſt ſtilus aurichalceus flexilis, media ſui parte quadratus, & per foramen ſimile extantis laminae horizontalis transmiſſus, ne convertere ſe poſſit. Extremo ſuperiore exiguam gerit ſtitulam transverſam ex eodem metallo, cui graphium e ſinopide aut plumbagine inſeritur. Huic graphio altior humiliorve ſitus dari poteſt, prout ſtilus ejus magis in collum natatoris aut minus deprimitur firmaturque.

Altitudinem & variationes barometri hoc graphio in tabula aenea ſuperius deſcripta notari debere, facile eſt intelligere. Quodſi graphium tabulae ſemper incumberet, fricti libertati

libertati motus tam diſci quam mercurii, praeſertim ubi hujus variationes exiguae ſunt, notabiliter obſtaret. Itaque opus eſſe patet, ut nonnullo intervallo a tabula ſejunctum exiſtat, & repetitis tantum vicibus ad eam accedat, notam impreſſurum. Hoc poſterius ſequenti fit artificio machinario.

Fiſtulae graphii prope imminet malleus aurichalceus, in laminae ſpeciem conformatus, ejus longitudinis, ut, quocunque loco graphium, motum mercurii ſequens, conſtiterit, pars mallei ſemper ei reſpondeat. Malleus hic elaterio chalybeo, quocum conjunctus eſt, verſus tabulam aeneam continuo ſollicitatur, adeo, ut, cum liber eſt, fiſtulam graphii feriat, quo ipſo temporis momento hoc graphium tabulam puncto ſignat, inde mox iterum recedens.

Ut malleus in motum agatur, virga orichalcea, cujus ope cum elatere cohaeret, brachio horizontali inſtructa eſt, brachio alteri perpendiculari inſiſtente. Brachium hoc poſterius a claviculis rotae horologii excipitur, quibus quoties excidit, elater laxatus malleum in graphii fiſtulam impingit. Rota iſthaec cum intra horae ſpatium circumvertatur, & 15 claviculis armata ſit, graphium quarto quovis minuto punctum tabulae imprimit, quae puncta adeo vicina invicem exiſtunt, ut eminus conſpecta continentem lineam formare videantur.

Linea haec e punctis compoſita cum elapſa hebdomade orbem efficiat, tabula aenea tollitur, ac nova in diſco firmatur, quod ſingulis hebdomadis repetendum. Cum notae his tabulis impreſſae durabiles maxime & ſtabiles exiſtant, intelligi ex iis in fine anni, quin etiam poſt longiſſimam annorum ſeriem poteſt, quis ſtatus barometri hoc illove die, hac aut illa hora, imo quovis temporis puncto extiterit.

Figura ſecunda exhibet barometrographum aptatum, in quo tabula aenea brevitatis gratia in dies tantum, non in horas, diviſa apparet.

Obſervationes hoc inſtrumento inſtitutas qui diligentius inſpexerit, conſtantem quandam in barometro mutationem tam ſub meridiem quam ſub mediam noctem, atque eam mutationem deſcenſum eſſe mercurii, vel ſaltem niſum ad deſcendendum, deprehendet. In his obſervationibus 446 tranſitus ſolis per meridianum, cum diurni tum nocturni, adeoque totidem variationes barometricae conſiderandae occurrunt. Omnibus attentius inter ſe collatis tres regulae ſequentes ultro ſe objiciunt.

Regula I. Sole meridianum tranſeunte barometrum deſcendens (ſeu quod in deſcenſu eſt), deſcendere pergit, & deſcenſum ſaepe accelerat.

Regula II. Sole meridianum tranſeunte barometrum aſcendens vel cadit, vel ſtat vel lentius aſcendit.

Regula III. Sole meridianum tranſeunte barometrum ſtans deſcendit, niſi ante vel poſt ſtationem aſcenderit, tunc enim & ſub tempus tranſitus ſolis ſtare ſolet.

Regula prima exceptionem unicam, ſecunda nullam, tertia ſex patitur. In poſterioribus hiſce barometrum ſole per meridianum tranſeunte ſtetit, quamvis & ante & poſt deſcenderit. Ad regulas autem & illas variationes reduxi, quae tempore tranſitus ſolari revera contigere, etſi ſub idem tempus barometrum mutationes nonnullas contrarias ſubierit. Septem has exceptiones ſi de ſumma 446 variationum ſubduxeris, remanent 439 regulis reſpondentes. Dum eas variationes ſole meridianum tranſeunte locum habuiſſe dico, non indiviſum illud momentum, quo ſol meridiano in tranſitu ſuo recta imminet, ſed totum temporis ſpatium intelligendum eſt, quo illi propinquus exiſtit.

Acciderunt vero univerſae hae variationes, quas regulis conſentientes eſſe diximus, a hora 11 ad medium primae, atque adeo intra horae unius & dimidiae ſpatium, ſex tantum exceptis, quarum quinque hora dimidia vel quadrante horae ante 11, & una hora dimidia poſt medium primae, ſeu ipſa hora prima, contigerunt, quod utique cauſſae cuidam particulari, effectum cauſſae communis maturanti vel retardanti, tribuendum eſt.

E dictis ſupra 439 variationibus tantum 54 poſt horam 12, reliquae omnes ante inciderunt.

Cum itaque barometrum ſole meridianum tranſeunte ad deſcenſum perpetuo cogatur, dubium non eſt, cauſſam phoenomeni tam conſtantis, tam mirifice legibus parentis, & eodem tempore identidem recurrentis, conſtantem pariter, perpetuam, atque immutabilem eſſe debere.

Cauſſas deſcenſus barometri atmoſphaericas primarias calorem & vapores eſſe abunde hodie conſtat. Verum ab harum neutra phoenomenum iſtud proficiſci poſſe, ſolidis nuper argumentis in commentationibus Academiae Scientiarum Theodoro-Palatinae demonſtravi. Inter haec praecipuum illud eſt, quod barometrum non tantum ſub meridiem, ſed etiam ſub mediam noctem deſcendat, quod poſterius utique hiſce cauſſis tribui nequaquam poteſt.

Ad cauſſas atmoſphaericas, barometrum deprimentes, venti quandoque accedunt. Verum cum hi circa meridiem juxta ac mediam noctem ſaepiſſime fileant, nec, ſi tunc ſpirent, ſemper ſint ejusmodi, ut columnam aëream, barometro inſiſtentem, leviorem reddant, ab his quoque deſcenſum barometri, ſub ea tempora incidere ſolitum, venire haud poſſe apertum eſt.

Quid reſtat igitur, quam ut cauſſam hujus phoenomeni extra atmoſphaeram noſtram quaeramus? Eam in ipſo ſole pronum eſt invenire. Cum hic enim vi ſua attrahente aquas oceani commoveat, in atmoſphaeram aëream vim eandem multo fortius exſerat neceſſum eſt. Ex iis igitur, quae de aeſtu maritimo conſtant, totum phoenomenum noſtrum facilem explicatum conſequetur. Primo enim a tranſitu ſolis per meridianum, ſicut aeſtus atmoſphaericus ipſe, a quo naſcitur, pendere debet; deinde tam in tranſitu ſolis nocturno quam in diurno locum habeat opus eſt, quoniam & aeſtus aëreus, ad inſtar marini, eodem tempore in oppoſitis terrae hemisphaeriis exiſtit; denique aeſtus ille atmoſphaericus, qui deſcenſum barometri noſtri progignit, non niſi effectus illius aeſtus eſt, qui intra tropicos contingit, ubi ſi aër ſub ſole tranſeunte aſſurgit, recedere a nobis debet, velut idem eſt de omnibus aeſtibus marium, extra hos circulos ſitorum. Ceterum aeſtus hos participantes, ſeu communicatione natos, citius & longius in atmoſphaera, quam in oceano, propagari inde colligere licet, quod particulis aëreis multo minor ſit gravitas & mutua cohaeſio.

Temporibus dein tranſituum lunarium per meridianum cum ſtatu barometri ſedulo collatis, variationes mercurii reperi exſpectatione mea multo minores.

DE MORBIS PER ANNUM 1785 RATISBONAE GRASSATIS.

Autore D. Schaeffer.

Generalis quidem hujus & ſuperioris anni epidemica *conſtitutio* erat *bilioſa*, ut & febris *ſtationaria* & *intercurrentes*, quas *Sydenhamus* vocat, morbi tantum non omnes bilioſam indolem vel aperte prae ſe ferrent, vel non obſcure proderent.

Januario enim menſe, quamquam tempeſtas ſat ſicca & frigida erat, morbi inflammatorii fere nulli, gaſtrici contra frequentes erant: ceterum tuſſes, catarrhi, glandularum parotidum & tonſillarum tumores pervulgares: variolae benignae hinc inde graſſantes.

Februario febres catarrhales omnis generis: coryzae, tuſſes, faucium & dentium dolores: dein rheumatismi, arthridis, podagra: febres intermittentes irregulares, emetici viribus in regulares tertianas verſae & ſine corticis ſubſidio facile profligatae, frequentiſſime oſtendebantur. Variolae bonam indolem non mutabant.

Martius quam plurimos vidit rheumaticis & catarrhalibus laborantes febribus, tuſſi, deſtillationibus & ſputis frequentibus comitatis, quas vero evacuantia facile removebant. Bilis enim horum omnium morborum fons & caput videbatur. Nonnulli etiam hoc menſe inſultu apoplectico vel reſolutione membrorum correpti. Variolae ſporaticae & mites, vix unquam mortiferae.

Aprilis diebus febres biloſae adultos & infantes invaſerunt, varia ſaepe ſpecie, ut rheumatica, apoplectica, maniaca, aſthmatica, teſtae. Non raro lethales erant, maxime

Junio febres, ſemper adhuc bilioſum ingenium ſervantes, putridae paſſim extiter

Julio rariores quidem tertianae febres, ſed & infantes adierunt. Morbi bilioſi

Auguſtus diarrhoeis, quin adeo dyſenteriis, vomificis tamen medicaminibus victis,

Septembris morbi plurimi & frequentiſſimi originem ſuam e policholia maxime

Autore SCHWAIGER.

Thermometrum ſolare, quod ceteris inſtrumentis hoc anno adjunximus, non quidem ſocietate Manheimenſi nobis communicatum eſt; per 8 vero continuos menſes jun thermometrum umbratile ſuſpenſum probavimus; nec umquam differentiam ultra 2 dec mas lineae partes deprehendimus. Simili fere modo inſtrumentum hoc vitro incluſum folisque radiis ac libero aëri ſupra verticem domus noſtrae expoſitum eſt, ſicuti Manh menſe, de quo tom. 1 pag. 71 clariſſ. HEMMERUS mentionem fecit.

Cum atmidometrum congelatione disrumpatur, maluimus in his circumſtantiis obſervationem omittere, quam evaporationem non ſatis tutam in calculum ducere. Hinc mitis diebus omiſſa reperietur evaporationis obſervatio.

Docent hae tabulae barometricae ſequentia.

Tab. I. 1) Altitudinem barometri maximam fuiſſe hoc anno menſe Junio, minimam menſe Februario; utrumque biduo poſt luniſtitium boreale, ſed hanc triduo ante plenilunium, illam triduo poſt novilunium.

2) Omnes altitudines tam maximas quam minimas locum habuiſſe vel in ipſo puncto aliquo lunari, vel certe intra biduum praecedens ſubſequensve, unica utrimque excepta.

3) Altitudines maximas plerasque inciſſe coelo fereno; minimas plerasque coelo nubilo ac pluvio.

4) Altitudines maximas plerasque ſocium habuiſſe ventum ex N vel O, plagisve contiguis ſpirantem; plerasque minimas ventum ex W vel S, adeoque ex plagis contrariis allabentem.

5) Variationem maximam = 1, 3, 2 quam proxime convenire cum variatione maxima anni 1783.

6) Variationem menſibus hyemalibus longe fuiſſe majorem, quam aeſtivis, id quod manifeſtius ex tabula II patet.

Tab. II. 1) Summam variationum totius anni = 550, 5 paulo minorem extitisse, qu
anno praecedente = 576, 8.
2) Variationem maximam menstruam fuisse menſe Decembri, minimam menſe Juni
3) Variationem maximam diurnam ascendentem = 5, 8 contigisse menſe Februa
descendentem = 5, 1 menſe Januario.
4) Variationes nocturnas proportionaliter minores esse diurnis, uti singulis annis pr
cedentibus.

Tab. III. Altitudinem barometri mediam = 24, 11, 36 proxime accedere ad illam a
1783.

Tab. IV. Hoc anno minorem fuisse altitudinem barometri matutinam, quam meridian

Ex his tabulis thermometricis ſequentia elucent.

Tab. I. 1) Calor diurnus maximus hoc anno in Auguſtum, minimus in Februarium incidit. Minorem in omnibus 4 praecedentibus annis non obſervavimus.

2) Variatio caloris annua = 38, 4 minor erat, quam anno 1782; major vero, quam ceteris 3 annis.

3) Variatio media pro menſibus aeſtivis fere aequalis eſt variationi mediae pro menſibus hyemalibus. Longe aliter ſe res haberet, ſi Martius menſibus hyemalibus, September econtra aeſtivis adnumeratus fuiſſet.

Tab. II. Altius pro more ſtetit barometrum tempore minimorum, quam maximorum calorum.

Tab. III & IV. 1) Frigidior communiter aura fuit tempore matutino, quam veſpertino.

2) Omnium menſium maxime calidus fuit September; maxime frigidus Februarius.

3) Calor medius annuus = 3, 94 minor erat, quam annis 4 praecedentibus.

4) Hoc quoque notatu dignum, menſes Majum, Junium atque Octobrem longe frigidiores fuiſſe, quam annis praecedentibus, uti ex tabula IV patet. Inde anni ſterilitas tam in ſementis, quam arborum fructibus.

Tab. V. 1) Calor ſolaris maximus diurnus in diem 7 Septembris incidit, quo die etiam calor umbratilis fere maximus obtinuit.

2) Calor ſolaris menſtruus aeque ac umbratilis maximus fuit menſe Septembri. Jure igitur menſibus aeſtivis adnumerandus hic menſis eſſet.

3) Differentia inter calorem menſtruum maximum ſolarem & umbratilem = 6°,93 eſt.

4) Calor menſtruus tam ſolaris quam umbratilis ab initio anni usque ad Septembrem continuo auctus; inde idemtidem diminutus fuit, ſolo Januario excepto.

Sequitur ex his tabulis.

Tab. I. 1) Menſis maxime calidus ac ſiccus September maximam quoque dedit evaporationem; minimam ex quinque menſibus, quibus obſervationes ſingulis diebus inſtituebantur, dedit Julius, Majo quidem ac Junio longe calidior, ſed ex his maxime humidus.

2) Evaporatio cum ſolo calore comparata nullam ſequi videtur legem. Si autem calorem cum ſiccitate conjungas, non obſcuram evaporationis invenies rationem. Si his quoque denſitatem aëris, ventorumque diverſitatem, maxime in viribus, adſocies, admirandam deteges connexionem has inter cauſas & evaporationem.

Tab. II & III. 1) Evaporationes maximae contigere potiſſimum coelo ſereno; minimae econtra coelo turbido, nebuloſo, ac pluvio.

2) Evaporationem augere videntur venti ex O, SO, NO & N venientes; illam diminuere venti ex S & W allabentes. Namque ultra expectationem major erat evaporatio 26 April. vento ex O veniente, & minor 27 Sept., 15 Dec., 20 Jul., 13 Oct., 6 Nov., ventis ex S & W venientibus. Minor evaporatio 18 April. forte ventorum viribus minoribus tribuenda.

3) Quoad lunae puncta nil certi eruere licet.

Tab. IV exhibet rationem caloris umbratilis ac ſiccitatis pro illis tantummodo 5 menſibus, quibus evaporatio ſingulis diebus obſervata fuit.

AURORAE BOREALES

ANNO 1785

IN SPECULA ASTRONOMICA MANHEIMENSI OBSERVATAE

A CAROLO KOENIG.

Junii 28. Mane hora 8 mirum in coelo phoenomenon apparuit, arcus nempe lucidus 37 gr. 10 min. altus multis flammiformibus radiis diſtinctus, qui ex centro poſt nubem nigram infra horizontem latentem exire viſi ſunt. Crurum diſtantia hujus arcus 184 gr., ejus declinatio ex S in W 45 gr. inventae ſunt. Arcus alius minor nullisque radiis diviſus recta in NO priori opponebatur, cujus altitudo 19 gr, & amplitudo 97 gr. 7 min. erant. Barometrum hoc tempore ſignabat 27, 11, 2. Thermometrum +15. Acus declinationem occidentalem 18 gr. 58 min., vento ſpirante N & reliquo coelo ſereno. Arcus auſtralis ſupremus (per quem luna, non vero per radios ejus, translucebat) brevi poſt loco ſuo in NO moveri incoepit, cumque hora $3\frac{1}{2}$ Zenith pertranſiit, curvedinem ſuam ita immutavit, ut, quae prius plagam SW, nunc NO reſpiceret. Ejus radii motu undulatorio plagam W petierunt, poſt radios vero tenues vapores elevari coeperunt, mox ut arcus e loco ſuo dimoveri. Hora $10\frac{1}{2}$ phoenomenon totum finitum eſt coelo ex memoratis vaporibus aequabiliter tecto, acuque magnetica ad 19 gr. 15 min. excurrente. Sequebatur phoenomenon hoc tempeſtas plerumque nubila, frequenter pluvia & frigida, & poſt dies 20 inſolitus acus magneticae motus, quae enim die 17 Julii 18 gr. 47 min., die 18 Julii in meridie declinabat 22 gr. 30 min., hor. 2 pom. 23, 7, ſpirante vento W vehementi, hor. 4 pom. 18, 41 aura pacatiori; die 19 Julii hor. 8 mat. 14, 12, in meridie 15, 30; die 20 Julii 19, 35,

& diebus 21 & 22 in meridie 20, 6. Suſpicio magnae cujusdam in globo terraqueo alterationis ex inſolito hoc acus motu concepta publicis novellis pariſinis comprobata eſt.

Octobris 5. Hora 7 veſp. poſt nubem aliquam nigram in N incoepit aurora borealis lucens informis figurae, & in modum remoti incendii omnia valde colluſtrans aſcendere. Duravit varias inter mutationes, quieſcente tamen acu magnetica, fere usque ad horam 8 cum dimidia.

Novembris 5. Coelo vaporoſo h. $8\frac{1}{2}$ veſp. lux inſolita tenebras nocturnas mitigavit, quia tamen aliud ſignum aurorae borealis comparuerit, quam lux major in plaga boreali, unde reliqua diffundi videbatur.

Novembris 29. Veſperi hor. 6 min. 10 poſt turbinem & pluviam vehementem aperto connihil coelo aurorae borealis initium ſe manifeſtat in duabus trabibus aeque a meridiano boreali verſus O & W diſtantibus, & valde lucidis. Hora 6 min. 18 recta in W ex nube nigra coruſcatio & ſubito novus ventus exoritur. Hora 6 m. 25 ambae trabes modo in forma nubecularum albarum & lucidarum verſus W ita promotae erant, ut, quae prius orientalis, jam in ipſo meridiano conſiſteret. Barom. 27, 2, 2; therm. +3; acus 19, 14; ventus SW. Hora 6 m. 31 repetitae ſingulis ſemiminutis coruſcationes, cum trabs prima occidentalis omnino evanuit, ſecunda usque ad extremitatem caudae urſae majoris progreſſa ſit. Hora 8 m. 2 coelum penitus obductum relicta tamen claritate quadam inſolita in tota atmoſphaera, aura incipit pacari. Hora 8 m. 41 tonitru fortiſſimum auditur, poſtmodum pluvia & ſubducta claritate nox nigerrima ingreditur.

ANNOTATIONES
IN OBSERVATIONES GENEVENSES.

DE INSTRUMENTIS.

Instrumentis Electoralibus jam diu designatis semper usus sum, sed quaedam notanda veniunt.

I. Tentando quotannis perfectionem meorum instrumentorum semper observavi, Barometrum, cujus variationes in his tabulis delineo, dimidia parte lineae fuisse depressius alio Barometro accuratissimo & saepissime probato, quo semper utor in aliis observationibus. Unde liquet, 1) barometra lapsu temporis suam perfectionem nullatenus amittere; 2) Barometra, quamvis non sint perfectissima, tamen perfectionem suam servare, & semper esse parallela, dummodo non parum a vera perfectione aberrent; 3) cognoscendo relationes barometri paululum imperfecti cum barometro perfectissimo, tunc veras variationes inde eruere licet; 4) hoc notetur circa omnes observationes meas barometri Manheimensis ope factas *).

II. Hygrometra Manheimensia nulla fide digna sunt, si comparentur ipsorum variationes cum variationibus hygrometri Dni de Saussure. Nam ut exemplum addam istius veritatis, narrabo tantum, in omnibus casibus infra citatis hygrometrum Dni de Saussure mihi semper indicasse 100 gradum, & hygrometrum anserinum mihi indicasse varios gradus a 20 usque ad 44. Sic

Gradus

*) Qui post ea omnia, quae in construendis barometris nostris observata, & tom. I. Ephem. a pag. 59 ad 64 relata sunt, error notabilis in his instrumentis manere possit, certe non videmus. Unde suspicandi locus est, barometrum Genevense ipsum, quod autor *accuratissimum* appellat, occulto quodam vitio laborare. Proficisci hoc vitium ex duplici capite potest, vel quod hydrargyrum non curate satis purgatum nostro sit levius, ac proinde altius in tubo consistat (loc. c. pag. 60), vel quod divisio tubulae fallaci mensura facta fuerit. Ea mensura, qua in barometris nostris usi ad hanc rem sumus, ad mensuram archetypam Parisinam diligentissime exactam ab ipsa scientiarum regia Academia ex hac metropoli accepimus (l. c. pag. 61), quare ab omni erroris suspicione, quae in sexcentas alias hujus generis mensuras jure cadit, immunis habenda est. Vide etiam, quae cl. socius noster Beguelinus in nuperrimis commentt. Berol. in eandem rem disseruit.

Gradus Thermometri non notavi, quia in tabulis facile consulendi sunt, sed anomalia mensis Aprilis silentio praetermittenda non erat *).

DE VAPORE CAERULEO.

Vaportam decantatus anni 1783 celebrior est, quia fuit diuturnus & densus, nam quotannis observari potest. Observatus est 13 die mensis Junii, colore, permanentia, solis pallore, tonitrubus sese conspicuum praebuit, ventorum vim irritam fecit, & atmosphaeram ipsi plus minusve immixtam quotidie nobis ostendit usque ad 16 diem Mensis Julii.

DE VARIATIONE VENTI VALENTISSIMI SUBITANEA.

Die Novembris 30 ventum occidentalem violentissimum experti sumus, paulo molliorem sese gessit horis vespertinis, & subito locum dedit vento gravissimo inter septentrionem & orientem. Observandum est, variationes barometricas fuisse minimas.

DE GELU.

Lacus noster gelu riguit die 2 mensis Martii, ita, ut pedibus siccis peragrarint nonnulli, sed observandum est, hocce phaenomenon intensitatem frigoris nullatenus significare; etenim frigore majori non conglaciata fuit lacus nostri superficies, sed cum crates maxima cingit extremitatem lacus nostri, qua data porta fluit Rhodanus, tunc, si ventus septentrionalis flat, frustula glaciei pelluntur versus hanc cratem, ubi agglutinantur, & brevi pontem efformant.

NOTAE

*) Quamvis hygrometra nostra e caule anserino confecta a justa perfectione longe adhuc abesse ipsi tomo Ephemeridum primo pag. 78 ostenderimus, non est tamen, quod mirum cuidam videatur, data eadem aëris humiditate gradus in hygrometro diversos observari, ubi calor diversus est, cum & hunc in illud agere constet. At ubi par aëris humiditas, & valde dissimilis calor est, eundem tamen gradum hygrometrum notare, uti diebus 2 & 19 Aprilis Genevae factum esse autor asserit, id attentum quamvis reddere merito debet. Itaque id agitur, an iis diebus revera par aëris humiditas extiterit. Hoc autor ex hygrometro Saussuriano pro certo assumere videtur. Sed quantumcunque praeclaris dotibus hoc instrumentum gaudeat, multum tamen abest, ut numeris omnibus absolutum esse credendum sit. Certe duo hujusmodi hygrometra, a cel. artifice Genevensi Paul confecta, in museo physico Electorali hic asservantur, quae rei gnaris hactenus non fecerunt satis. Praeterquam enim quod jam per duos annos fere semper immota steterint, etsi fenestra juxta ac janua indies saepius aperiantur, punctum humiditatis maximae, quod recenter adlata & ex praescripto cl. Saussure examinata fideliter semper signavere, eidem post haec examini saepius & diversis temporibus subjecta non amplius indicarunt, sed notabili intervallo superarunt, indice non jam ad centesimum, sed ad centesimum quintum, sextum, aut altiorem adhuc gradum subsistente, aperto argumento, resolutos esse capillos, & elasticitatis sua partem amisisse.

OBSER-

ANNOTATIONES SPECIALES
IN OBSERVATIONES RATISBONENSES.

JANUARIUS.

Die 4. Nulla propemodum dies hoc menſe absque nebula tranſiit, ſpiſſa plerumque, ac totam diem perdurans. Quarta praeſertim hujus denſa involvebamur nebula, quae integra die pluviae in modum cadere, ac feneſtrarum ſuperficiei adhaerere conſpiciebatur.

FEBRUARIUS.

Die 19. Circa meridiem in Bavaria ſuperiore tempeſtas ac tonitrua obſervata ſunt.

21. Notatu digna eſt inconſtantia acus magneticae. Die 20 h. 8 veſpert. declinatio erat 18, 50; die 21 hora 1 poſt med. noct. 18, 30; mane h. 5 18, 54; tum 19, 9, ac demum veſpere ad 18, 57 rediit. Fors Aur. boreal. a me non obſervata hujus mutationis cauſſa erat.

Inſolita nivis copia hoc menſe eo usque increvit, ut omnia propemodum invia redderentur.

MARTIUS.

Die 1. Hodie maxima frigoris intenſitas thermometrum ad —20, 2 usque depreſſit, idque in loco aëri non admodum pervio. Quae quidem frigoris vis, hoc praeſertim menſe, apud nos pene inauditum phoenomenon eſt.

13. Hora 6 mat. therm. in libero aëre —13, 5.

17. Danubius adhuc glacie tam valida conſtrictus eſt, ut & homines & plauſtra onerata ferat.

19. Ratisbonae Danubius aperitur, ac glacies diſſolvitur.

31. In locis Ratisbona leuca diſſitis, glacies Danubii adhuc pontis vices praeſtat.

Quum ad finem hujus menſis omnis, qua late patet, regio alta adhucdum nive ſepulta eſſet, dici vix poteſt, quanta ubique penuria pabuli jumentis alendis neceſſarii fuerit. Optimum frumentum aeque ac ſtramina tectorum iisdem ſuſtentandis adhibebantur, prout cujusque fortunae id patiebantur.

APRILIS.

Die 15. Nondum nos hyems deſeruit, magnaque agrorum pars nive adhuc contegitur.

A 16 — 24 aquae Danubii nova ſemper incrementa coepere, ita quidem, ut d. 24 tribus pedibus, 6 digitis altitudine littus ſuperarent. Magnum exinde damnum adjacentibus agris, pratisque enatum.

MAJUS.

Die 26. Plures hodie tempeſtates obſervavi. Illam, quae poſt h. $8\frac{1}{2}$ veſp. vehementiſſima erat, grando comitabatur, quae agros Hartinganos aliosque leuca circiter Ratisbona diſſitos devaſtavit.

Praeter omnem exſpectationem laeta apud nos ſegetum facies. Minus ſauſta nobis ex Bavaria ſuperiore narrantur, ubi diuturna nix nimiaque ipſius copia ſpem coloni pene eluſit.

Scarabaei apud nos pene nulli: flores tamen in arboribus rari.

JUNIUS.

Die 1. Triſtis dies, pluvia ventoque infeſta.

4. Mane h. $4\frac{1}{2}$ thermometrum Reaumurianum in hortum monaſterio vicinum detuli; poſtquam dimidia hora ibidem remanſerat, mercurius ad gradum 1, 7 conſtitit.

16. Hora 2 pom. tempeſtas remota. Tempeſtates fere omnes ab occidente nos petunt, rarae tamen urbi recta imminent, ſed ubi ad aliquam diſtantiam urbem acceſſere, a via ſua ſeptentrionem aut meridiem verſus declinant, nosque innoxiae praetereunt: cauſſa hujus mutati curſus in ſitu agri Ratisbonenſis, quem fors alio tempore dabo, poſita mihi videtur.

20. Per totam diem pluvia non intermiſſa.

JULIUS.

Die 20. Hora $4\frac{1}{2}$ veſpere ſubita tempeſtas, levis tamen, quippe nonniſi tria aut quatuor tonitrua audivi. Hac tempeſtate ſacerdos ſaecularis fulmine tactus eſt extra urbis moenia haud procul a loco multis arboribus conſito. In cadavere ſequentia obſervavi: Pileus praegrandi foramine pertuſus, ſciſſuris radiorum inſtar divergentibus; tempora dextra ſanguine ſuffuſa, capillique ibidem aduſti; faſcia ſerica collo circumdata in fruſta diſrupta; veſtimenta interiora a ſummo ad imum usque ſciſſa; horologium portatile, aurumque (Carolinos appellant) nonnihil fuſum. Eodem in ſacco claves, cultrumque geſtabat. Hucusque fulmen dextrum latus petiit, tum vero a dextro femore ad ſiniſtrum pedem tranſiliit, perque calceum notabili foramine

mine ſciſſum viam ſibi aperuit. Pes ſiniſter aliquantum laeſus. Nocte ſubſequente ſanguis ex naribus, auribus, oreque prorumpere, pectusque ſanguine, ut videtur, ſuffuſus nigreſcere, atque cadaver poſt 24 horas jam in putredinem abire coepit.

Utrum fulmen ex nubibus in terram, num vero ex terra in nubes tranſierit, incertum; alterum tamen vero mihi ſimilius videtur.

AUGUSTUS.

Humida hujus menſis tempeſtas, continuaeque pluviae magnam ſegeti ſtragem intulere. Fruges quippe ad meſſem jam maturae maximam partem madidae horreis mandabantur. Quarta hujus apud nos initium meſſi datum. Omne pene frumentum in agris refectum jacebat, quum 10 hujus pluere coepit, nec, uno alterove die excepto, ante 23 ceſſavit. Frumentum partim tabie corruptum eſt, partim novum germen protruſit, rariſſimum ſanum horreis condi potuit.

Quae calamitas niſi coloni ſpem fruſtraſſet, uberrima omnium frugum ſeges apud nos obtinuiſſet.

SEPTEMBER.

Die 10. Hora poſt meridiem ingens in Bavaria ſuperiore tempeſtas, ubi turbo, pluvia, grando, inundatio certatim omnia devaſtarunt. Malum Monachio Abenſpergam usque protrahebatur; Friſingae maxime saeviit. Fruges in agris, foenumque undis abreptum; viae publicae, agri, prata foede devaſtata.

Id notatu dignum, nos Ratisbonae ne veſtigium quidem tempeſtatis hujus aut pluviae obſervaſſe.

Meſſis in medium usque Septembrem protracta eſt.

OCTOBER.

Uvae apud nos ad maturitatem non pervenere. Vinum rarum, acerbum.

SEPTEMBER.

De agricultura.

Uno ab hinc menſe omnia ſumma vegetatione gaudent. Annum, ut ita dicam, incipere credas. Quae temporum immutatio! debetur haec imbribus nimiam ſiccitatem ſubſecutis. Quod ex ſpicis in terram decidit hordeum, germinavit, crevit & in ſpicas aſſurrexit. Idem dicendum de hordeo, quod in pabulorum ſupplementum terrae creditum eſt. Floreſcit linum, quod e granis in terram delapſis germinavit. Floreſcunt etiam, quaſi primo vere, papaver rubrum, cyanus, pratenſisque bellis. Eodem vultu, quo menſe Majo, laetantur horti.

Medio circiter menſe fere ubique, & eodem tempore vindemiari coeptum eſt. Non hoc anno, ſicut annis praeteritis, moram habuiſſe videtur uvarum maturitas quorumdam dierum aut hebdomadarum, qua ratione vites diſtant a maris littore.

Pluviae frequentiores, unde uvarum putredo. Prae vini copia & doliorum defectu, aquam vitae ex tempore ſtillari neceſſe eſt; parumque vini ſpiritus redit e cortinis igne calefactis.

De infectis.

Pauciſſima hoc anno viſa ſunt. Rariſſimae cochleae, rariſſimae etiam erucae metientes, quamvis hoc erucarum genus vulgo ſit uberrimum. Nullae aliae erucae. Nullae ſunt limaces rubrae.

Pabulorum penuria novum in hac provincia culturae genus innotuit. Regni adminiſtris raparum naporumque diverſi generis ſemina inter agricolas diſtribui, ſapienter proviſum eſt, quibus variis ſeminibus profuit pluvia. Folia radicesque pecudibus optima, hominibus etiam bonae radices, quae guſtus exquiſiti gratia menſis quoque divitibus apponuntur.

Die 25 feliciter naſcitur triticum, ſive in depreſſioribus, ſive in excelſioribus agris conſitum.

Elevantur aquae.

DECEMBER.

De agricultura.

Die 1 exſiccatarum paludum foſſae implentur. Nihil quoad agriculturam novi, ſi hoc unum excipias, quod, terra paſſim herbis virente, pabula ſicca rariſſima, magnique pretii parce ſuppeditantur.

OBSERVATIONES CANTABRIGIAE IN AMERICA FACTAE

AUTORE
SAMUELE WILLIAMS.

Universitatis Cantabrigiae situs, eique circumjecta regio quomodo se habeat.

CANTABRIGIAE in America universitas sita est in planitie late patenti. Haec planities fere ad ter mille passus anglicos circumcirca protenditur. Quibusdam in locis colles interjiciuntur exigui & valles.

Cantabrigia est pagus, seu oppidum, ab oriente ad occasum circiter bis mille passus patens; a meridie vero ad septentrionem sexies aut septies mille passus excurrit, domosque quater ferme centenas complectitur. Ex his centenae, intra quingentos passus, universitati circumjacent; reliquae per oppidum sparsim, vario distantes spatio, collocantur, prout sua quisque habet negotia diversa, quibus sint adaptatae. Amnis haud minimus, cursum ab occidente ad orientem tenens, per oppidum illabitur, cui nomen anglicum *Charles River*. Ab universitate austrum versus ducentis circiter & quinquaginta passibus cursus distat. Amnis ripis ex utraque parte spatiosi adjacent campi, fluxu amnis marino saepe rigati. Fluxus hic marini ad pedes 15 plerumque tument, & ter mille passus abhinc ulterius in nos per amnem ascendunt. Quantitatem salis, aqua hic marina contentam, experimentis crebro factis $\frac{1}{28}$ partem ejus esse comperio. — Solum maxima ex parte est foecundum; id autem, quod universitati propius adjacet, ad arenam sabulumque vergit. Laetis regio pascuis, pomariis, hortis, agrisque gramine, avena, hordeo, secali & farre americano ornatis, hinc & illinc abundat. Haec alimentis & voluptati cumulate sufficiunt.

Oppidum, eique vicina regio, rivulis, puteis, fontibusque belle scatet. Aqua est munda, limpida, & pellucida, quovis foedo gustu, odore, & mistura turbulenta expers, & cujuscunque res domesticae aquam postulant, ei inservit. Aquae in *puteis*, ad gradum thermometri Farenheitiani 47°, plerumque inveni temperamentum, quod nec hyeme nec aestate multum immutatur. Temperamentum *fontium* commune gradui ejusdem mensurae 49° adstat.

Atmo-

Atmosphaerae temperies vero mutationes subit ingentes & vicissitudines. Thermometrum Farenheitianum quandoque gradibus 14 infra o subsidit. Interdum & ad gradum 99 usque ascendit. Nec insolitum est, hoc thermometrum, horarum spatio duodecim, gradibus 30 variare. Atmospherae ponderis seu gravitatis haud permulta est varietas. Nec siccitatibus fumus servidioribus obnoxii. Aërem esse purum admodum & salutiferum, experientia probatur constante. Quam ob rem, qui oras maritimas, imo etiam longinquas hujus continentis partes incolunt, huc, salutis gratia, se conferre solent.

Qui ex Anglia migraverant, sedem hic anno 1632 primum statuerunt. Universitatis fundamenta anno 1636 jacta fuerunt. Omnibus, quas in America anglica exorti constituerunt academias, haec est prior. Latitudinem ejus, observationibus crebro factis, 42°, 23', 28" septentrionalem esse comperio. Ejusdem longitudo a specula Grenovici regali occidentalis est 4^h, 44, 31, vel ab ea, quae est Parisiis, 4^h, $5\frac{1}{2}$, $47\frac{1}{2}$.

Instrumenta cujus sint generis, & quomodo sint dispositа.

Instrumenta meteorologica, quae munificentia Serenissimi CAROLI THEODORI Electoris Palatini, fuerunt ad universitatem missa, sunt barometrum, cui suum est thermometrum, alterum thermometrum, hygrometrum, & instrumentum declinatorium. Haec instrumenta ad nos die 8 Septembris 1785 pervenerunt. Omnia erant salva & illaesa, praeter thermometrum simplex, cujus tubus erat perfractus, & argentum vivum fuit amissum. Haec instrumenta (instrumento declinatorio dempto) in fenestra, quae ad occasum spectat, a terrae superficie pedibus circiter quinque extante, ita disponuntur, ut neque radiis solis, neque calore quovis factitio unquam affici possint. Rupti vice thermometri, alio, a *Nairne* Londinensi fabricato, optimo, quod cum thermometro electorali, quam maxima potest accuratione, fuit collatum, utor. Hoc thermometrum, una cum hygrometro, extra fenestram positum est, ut utrumque aëri patenti semper objiciatur. Horum situs instrumentorum supra maris aequor 25 pedibus exstat.

Instrumentum declinatorium fulcro, aedificii parieti optime affixo, imponitur. Hoc fulcrum, seu basis, est ligneum, & adeo firmum est ac stabile, ut nullam mutationem pati possit. Acus directio, linea ad circulum meridianum accurate ducta, dijudicatur. Ferrum autem est omne ab illa 4 pedum spatio dimotum.

Quam ad partem perflet ventus, iudice versatili, in aedis fastigio erecto, innotescit. Hic index versatilis supra terrae faciem 135 pedibus pendet; & re quapiam, universitati propinqua, est altior. Vento, quoquo versum perflet, omnino patescit. Pyxidis indices infra turriculae subscribuntur, quibus directio indicis supra versalis accurate & facile conferri potest. *Vis venti* opinione aestimatur. In vi ventorum notanda, aura lenissima, quae arbo-

 rum

rum frondes non nisi leniter agitare sufficit, nota 1 indicatur; vim autem validissimam, tempestatis scilicet seu procellae, nota 4 significat.

Pluvia vase stanneo, cujus superficies 200 uncias quadratas ad unguem continet, colligitur. Inde, per tubum angustum, defertur in receptaculum amplum, quod, ne in vapores abeat, arcte occlusum servatur. Quantitas pluviae, eo modo collectae, per tubum, cujus foraminis superficies exacte est unius unciae quadratae, & longitudo 20 unciarum, aestimatur. Hinc igitur aqua, hoc tubo semel impleto, contenta, decimae unciae parti altitudinis pluviae est aequalis. Aqua, ad secundam in tubo unciam, $\frac{1}{100}$ unciae partem pluviae altitudine valet: unciae autem aquae $\frac{2}{100}$, tubo contentae, $\frac{1}{1000}$ unciae partem pluviae altitudine aequiparabunt. Hae mensurae non sunt notatae, dum transierit pluvia; & pluviae, quae deciderat, altitudinem perpendicularem, more anglico metiendi, indicant. — Vas, quo pluvia colligitur, in soli superficie, medio horti patentis, collocatur, & vento pluviaeque quaquaversum objicitur. Est autem in soli superficie eo potius, quam in aedium culmine collocatum, quod pluviae quantitatem, quae in terrae faciem decidit, tertia fere parte majorem, quam quae in parem superficiem, 55 pedibus altam delabitur, pluribus experimentis factis, esse comperio.

Ut, quantum aquae *Evaporatione* abeat, metiar, vase utor stanneo, cujus superficies 20 uncias quadratas praecise complectitur, altitudo autem est 10 unciarum. Quantum aquae huic vasi sit infusum, quantumque inde evanescat, tubo definitur eodem, quem pluviae metiendae adhibeo. Hic tubus, aqua semel impletus, aquae in vase, illius altitudine aestimata, unciae uni erit aequalis. Aquae in tubo duae unciae, $\frac{1}{10}$ unciae partem aquae, vase inclusae, valebunt. Unciae autem $\frac{1}{10}$ in tubo, $\frac{1}{100}$ unciae parti in vase, erunt aequales. — Hoc vas uno circiter pede a soli superficie, juxta id, quod accipit pluviam, stat elevatum, at ventis solisque ardori plane exponitur. Hoc vas aqua, primo cujusque mensis die, est impletum, & quotiescunque, mense labente, evaporatio ad unam circiter altitudinis unciam accreverit, denuo repletur. Inde, quae ad evaporationem spectant observationes, non quanta sit diurna, sed quanta mense uno sit, evaparatio, monstrant.

Amnis, qui per oppidum perfluit, observationibus de ipsius aquarum fluxu & refluxu minime est idoneus. Necdum est mihi *Electrometrum*, quo atmospherae electricitas rite perpendi possit.

De observationibus hujusce anni 1785 notandum est, eas omnes, quae barometro, thermometro, & instrumento declinatorio erant, ante 25 Septembris capessitae, instrumentis, a *Nairne* constructis, factas fuisse. Haec instrumenta cum iis, quae ad nos *Manheimio* missa sunt, diligenter & accurate comparavi, & observationes prioribus factae (ubi opus erat, correctae) ad mensuras, in posterioribus exaratas, reducuntur, iisque sunt notatae. A die vero vicessimo quinto Septembris usque observationes instrumentis electoralibus omnes fuerunt capessitae.

CANTABRIGIAE IN AMERICA AN. 1784 INSTITUIT

EDUARDUS WIGGLESWORTH,

THEOLOGIAE IN UNIVERSITATE PROFESSOR.

OBSERVATIONES Cantabrigienſes tribus quotidie vicibus, hora ſcilicet 8 matutina, 1 pomeridiana & 9 veſpertina, inſtitutae fuerunt. Barometrum & thermometrum a Champney Londini facta, in ſcalis juxta feneſtram borealem collocata erant. Altitudo mercurii in barometro, pollicibus anglicanis & partibus eorundem centeſimis, eſt deſignata. Scala thermometrica eſt Farenheitiana.

His obſervationibus tabula expectationis vitae comparativa, inter filios univerſitatis Laureis academicis donatos, & inter Hinghamiae & Doveriae incolas, & quoque inter incolas variarum Europae partium, addita eſt. Filii univerſitatis muneribus, tum civilibus tum eccleſiaſticis, in omnibus reipublicae partibus, funguntur. Hinghamia in portu Boſtonienſi Euronotum verſus ſita eſt; & abhinc diſtat circiter 25 millia paſſuum. Doveria, in Peninſula arida inter duo brachia fluminis Piſcatuquaenſis, collocata eſt, & a nobis circiter 65 millia paſſuum, Caeciam verſus, diſſita eſt. — Expectatio vitae alicujus perſonae, in eadem linea cum ejus actate, annis & anni partibus centeſimis notata, inveniri poteſt. Per hanc tabulam judicium rectum, de noſtri climatis ſalubritate, formari poteſt.

IN HAC VICINITATE DOMINANTES,

ISAACI RAND,

MEDICI CELEBERRIMI, CURA ET STUDIIS OBSERVATI.

Januarius. Nonnulli peripneumoniis, paucos poſt dies febribus nervoſis terminatis, laboraverunt. Plurimi catarrhis & nonnulli phthiſi pulmoniaca afflicti fuerunt.]

Februarius & *Martius.* His menſibus febres peripneumonicae, ſenibus ſolis lethales, praevaluerunt.

Aprilis. Febres nervoſae & morbi rheumatici hunc menſem infeſtarunt.

Majus & *Junius* febres lentas ac putridas, cum morbis diuturnis, produxerunt; menſis autem poſterior moris erat benignioris.

Julius. Iidem morbi etiamnum manebant. Julius autem fuit morbo deſignatus, annis praeteritis juventuti valde mortifero, vulgo dicto „The throat diſtemper", cui regio noſtra ſaepe eſt abnoxia. Ex 94 autem, qui hoc morbo angebantur maligno, 6 tantum inter mortuos ſunt numerati. Hic morbus ad anni finem usque ſaeviebat.

Auguſtus eosdem ac prior, protulit morbos.

September morbo, in gutture, maligno putridoque febres biliosas adjecit.

October & *November.* Plurimi febribus putridis & dyſenteriis laboraverunt.

December cum plurimis lentis febribus & pleuriticis, finem attulit anno.

ANNOTATIONES

IN OBSERVATIONES RUPELLENSES.

Die 6, hora 4 cum 3 quadrantibus, observatum est in portu Rupellensi phaenomenon, vulgo dictum *Raz*, vel potius *Rat de Marée*, ita notabile, ut nemo navigandi peritus quidquam simile se vidisse meminerit. Aliqua vi spirabat ventus WSW, longe aberat tamen, quin impetu nimium violento fureret. Barometri altitudo 27, 9, 5. Derepente mare 18 pollicibus in portum ascendit, tanta vi, tamque vehementi aquarum incitatione decurrens, ut anterioris portus moles oppositas facile superaverit; quae tamen 8 & amplius pedibus maris hac die plenius aestuantis aequori super eminebant. Neque hoc fluctibus, sed

profecto quadam inſolita aeſtus maritimi elatione factum putes; tota enim undique maris ſuperficies ſupra dictam videbatur habere altitudinem; omniaque etiam tranſcendiſſet portus littora, niſi obſtitiſſet aditus duabus turribus anguſtior. Sed inter utramque turrim praeceps ruebat aquarum curſus, eadem velocitate, qua ruere ſolent aquae, recluſa oppoſiti aggeris porta.

Quae tanta undarum curſus violentia, ita vehementem & effrenatum edidit maris refluxum, ut omnium navium in portu poſitarum retinacula penitus confracta fuerint. Quinque poſt minuta temporis momenta, eadem decrevit mare, qua velocitate excreverat. De via deflexit aquarum curſus; & hora 5 cum quadrante celeriter adhuc mare decreſcebat, quamvis mare hoc die plenius aeſtuans, ad majorem elationem non eſſet perventurum, niſi 6 h. 6'. Decreſcere denique mare non ceſſavit, ſed tardiore curſu.

Nullus interea gravis caſus accidit. Totoque phaenomeni tempore immota remanſit acus magnetica; neque etiam poſtera die in hanc aut aliam partem deflexerat. Fragoſo ſtrepitu iratum mare procul obmurmurabat; nec niſi peracta nocte ſiluit. Nocte demum ſequenti magna fuit maris acceſſio, ſed absque ullo, ut antea, vehementi undarum receſſu.

Novam hanc & inexſpectatam elationem pronuntiaverant barometri vices, quod cum die 3 ad 28, 3, 0 aſcendiſſet, ad 27, 9, 5, poſitis quibusdam temporis intervallis, ſenſim ac pedetentim deſcenderat, mox ad 28, 1, 0 reverſum iterum ad 27, 9, 5 ſubito redactum inveniretur.

Nota. Per noctem, quam dies 6 ſubſecuta eſt horrida, Plimuthi, in Anglia, coorta eſt tempeſtas, quae tota die eumdem ſervavit impetum. Courier de l'Eupope, du 13 Septemb. 1785.
