Erläuterungen zu den Tabellen.

Niederschlagshöhe in Millimetern.

(Tabellen I, S. 1—722 und II, S. 1—361, 865—870)

Diese Tabellen bilden den Hauptbestandteil des Werkes. Sie enthalten von 3983 Stationen die monatliche und jährliche Niederschlagshöhe, ausgedrückt in ganzen Millimetern, für die jeweilig vorhandene Beobachtungsperiode bis zum Dezember 1890, ferner bei den meisten Stationen die größte in jedem Jahre verzeichnete Tagesmenge, ausgedrückt in ganzen und Zehnteln Millimetern.

Die Reihenfolge der Stationen ist in dieser wie in allen folgenden Tabellen eine streng hydrographische: sie beginnt jedesmal mit der obersten Station am Quellfluß, geht diesen abwärts bis zur Einmündung des ersten Nebenflusses, folgt diesem wieder von der Quelle bis zur Mündung, sodann am Hauptfluß weiter bis zum nächsten Nebenfluß u. s. f. Man kann also bei jeder beliebigen Station eines Flußgebietes die oberhalb gelegenen ohne weiteres übersehen, also auch schnell ermitteln, welche Niederschlagsmengen bei der Beurteilung der an dem betreffenden Ort zum Durchfluß gelangenden Wassermengen in Betracht kommen. Beim Flußgebiet der Elbe sind auch einige nahe der Wasserscheide, aber schon im Einzugsgebiet der Donau gelegene Stationen zur Ergänzung [»Ergänzungsstation«] mit aufgenommen worden.

Wer die Anordnung der Stationen nach ihrer Flußzugehörigkeit nicht brauchen kann, sondern lieber das Beobachtungsmaterial einer irgendwie anders begrenzten Gegend oder eines administrativen Bezirkes kennen lernen möchte, kann dies mit Hilfe der »Verzeichnisse« am Schluß des Textbandes leicht erreichen.

Unter dem fett gedruckten Namen der Station steht in Klammern und in Kursivschrift der Name des zugehörigen Flusses. Bei den größeren, reich entwickelten Flußsystemen wurden noch Nebenflüsse dritter und vierter Ordnung berücksichtigt. Für die oft sehr wechselnde Schreibweise der Flußnamen galt fast überall als Richtschnur die »Wasserkarte der Norddeutschen Stromgebiete«, herausgegeben vom Kgl. Ministerium für Landwirtschaft, Domänen und Forsten im Jahre 1893, nebst dem zugehörigen Textbande.

Links im Kopf jeder Tabelle steht die Angabe der Höhe des Ortes über dem Meeresspiegel (H = ... m). Diese Höhenzahlen dürfen oft nur als angenähert richtige angesehen werden, da die Hilfsmittel zu ihrer Bestimmung sehr ungleichwertig sind, ja bisweilen ganz fehlen. Zahlen mit * bedeuten unsichere Angaben. Wenn diese Höhenangaben mit denen des »Verzeichnisses der Stationen nach Ländern« am Schluß des Textbandes bisweilen nicht übereinstimmen, so ist überall den letzteren der Vorzug zu geben, weil sie auf Grund neuerer Bestimmungen und Vermessungen gewonnen worden sind.

Rechts im Kopf jeder Tabelle steht die Angabe der Höhe des Regenmessers (Auffangfläche) über dem Erdboden (h_r = ... m). In einzelnen Fällen findet man in den »Bemerkungen zu einigen Stationen« am Schluß des Textbandes vor den Registern nähere Aufschlüsse über die wechselnde Höhe des Regenmessers, seine Aufstellung u. s. w.

In allen Tabellen selbst bedeuten kursiv gesetzte Zahlen etwas unsichere Werte; durch ein Fragezeichen wird die Richtigkeit des Wertes angezweifelt. Im allgemeinen sind aber solche Fragezeichen vermieden und die Angaben lieber ganz weggelassen worden, wenn sie sich nach kritischer Prüfung und im Vergleich mit anderen Stationen als ganz unwahrscheinlich erwiesen. Andererseits mußte man sich aber auch davor hüten, in dieser Beziehung zu weit zu gehen. Es sind darum sicherlich noch manche Angaben hie und da stehen geblieben, die nicht richtig sind. Einigemal sind sogar ganze Reihen durchweg mit kursiven Ziffern abgesetzt worden, weil sie mit einem prinzipiellen Fehler behaftet sind; sie wurden aber nicht ganz weggelassen, wenn aus der betreffenden Gegend sonst wenig Beobachtungen vorlagen, weil sie doch wenigstens über den relativen Niederschlagscharakter der einzelnen Jahre einigen Aufschluß geben können.

Bei Beobachtungsreihen von 10 und mehr Jahren wurden die Summen und Mittel gebildet, sowie die Extreme ausgezogen. Der Mittelwert für das Jahr ist stets gleich der Summe der 12 Monatsmittel, nicht aber der Durchschnitt der einzelnen Jahressummen. Bei lückenlosen Reihen sind beide natürlich identisch.

Gröfste tägliche Niederschlagshöhe in Millimetern.

(Tabellen II, S. 363—513, 871—872)

Diese Tabelle enthält die größte tägliche Niederschlagshöhe, ausgedrückt in ganzen und Zehnteln Millimetern, für die Monate und für das Jahr nebst dem Datum der letzteren. Sie wurde nur von denjenigen Stationen abgedruckt, welche eine mindestens 15jährige brauchbare Reihe aufweisen.

Die Mittel sind überall die arithmetischen aus allen Zahlen der entsprechenden Spalte.

Wenn bei einigen Schweizerischen Stationen die Werte für das Tagesmaximum des Jahres in der ersten und in dieser zweiten Tabelle bisweilen verschieden sind, so erklärt sich das daraus, daß diese letztere Tabelle in Zürich nach den

auf der Meteorologischen Zentralanstalt vorhandenen Originaljournalen vor ihrer Drucklegung durchgesehen und vielfach korrigiert worden ist.

Die neben dem Ortsnamen in Klammern stehenden Ziffern weisen auf die erste Tabelle hin, in der man die Niederschlagshöhe der betreffenden Station findet; z. B. (I 32) = Seite 32 im I. Bande der Tabellen.

Zahl der Tage mit mefsbarem Niederschlag.

(Tabellen II, S. 515—613)

Zahl der Tage mit mehr als 0.2 mm Niederschlag.

(Tabellen II, S. 615—703)

Beide Tabellen enthalten nur brauchbare Reihen von mindestens 15 Jahren Dauer.

Zahl der Tage mit Schnee. Schneegrenzen.

(Tabellen II, S. 706—826)

Diese Tabelle, die auch nur für Stationen mit mindestens 15jähriger Beobachtungsreihe gegeben werden konnte, ist nicht nach dem bürgerlichen Jahr, sondern nach Wintern angeordnet, dementsprechend auch das Datum des ersten und letzten Schneefalls. Auch hier wurde die mittlere Wintersumme aus den mittleren Monatswerten gebildet. Bei längeren Reihen sind natürlich die mittleren Summen der Schneetage für den physischen Winter und für das bürgerliche Jahr nahezu identisch.

Zahl der Tage mit Graupel und Hagel.

(Tabellen II, S. 827—862)

Diese Tabelle lohnte es nur von Stationen mit längeren Reihen von 20 und mehr Jahren zu geben.

Vor der Benutzung der Tabellen beachte man die letzten Nachträge und Berichtigungen am Schluß des Textbandes.
